PhilPost HR System

User guide for HR Staff and System Admins

How to sign in, find your way around, and use every part of the system: employees, onboarding, wellness leave, annual requirements, certificates, contracts, payroll, wage orders, messages, received mail, remittances, imports and the administration pages.

Website: **https://phlposthr.com**
Version: November 2026

The screenshots use fictional sample data. Names, numbers and figures in them are not real.

1 About the system and roles

The PhilPost HR System keeps the office's employee records in one place and produces the documents HR needs: certificates of employment, contracts of service, payslips, remittance lists and vouchers. It also sends email notices to employees, such as payslips, leave updates and requirement reminders.

Only HR accounts sign in. Employees don't have accounts; they receive emails at the address on their record. Nobody can sign up on their own: a System Admin creates each account.

The two roles

Role	What it can do
HR Staff	Every HR feature: employee records, onboarding, leave, requirements, certificates, contracts, payroll, wage orders, messages, received mail, remittances, imports and exports, deleting records, settings, and the audit log of HR records.
System Admin	Everything HR Staff can do, plus **HR Accounts** (add, change, disable, unlock and delete accounts), the **Email Server (SMTP)** settings, deleting an issued certificate or contract from the numbered log (HR Staff void it instead), and the history of account and mail-server changes in the Audit Log.

In this guide, a page or action only for System Admins is marked ADMIN.

Things that work the same everywhere

- **Required fields** are marked with *. If something is wrong, the field is outlined in red with a message under it, and nothing is saved until it's fixed.
- **Deleting** always asks you to confirm first. Some records can't be deleted while other records depend on them. For example, a branch with employees in it can't be deleted, and the system tells you why.
- **Unsaved changes**: if you leave a form you've changed without saving, the browser asks before discarding your changes.
- **Issued documents are frozen.** A certificate or contract keeps the exact text it was issued with, even if the template or the employee record changes later. To correct one, void it and issue a new one.
- **Every change is recorded** in the Audit Log: who changed what, when, and the before and after values.
- **Dates** are shown like *Nov 6, 2026*, and the system works in Philippine time.

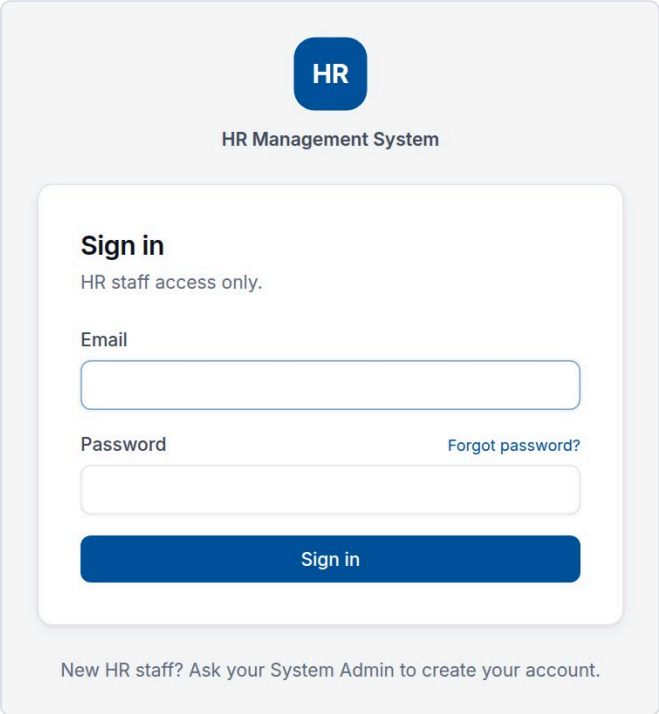

2 Signing in and out

Your first sign-in

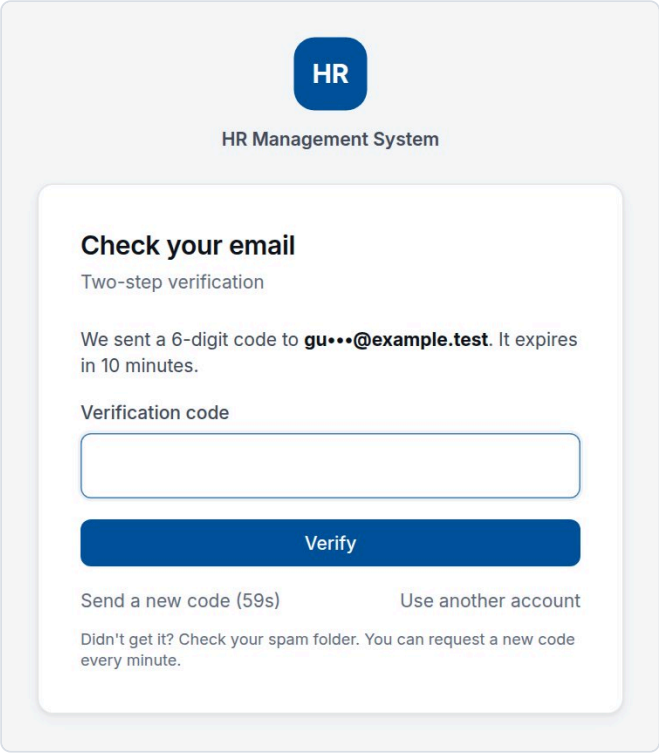

When a System Admin creates your account, you get an invitation email. Open the link in it and choose your password: at least 10 characters, with both letters and numbers. The link works only once, and expires if it isn't used in time. If it has expired, ask a System Admin to send a new one from **HR Accounts**.

Signing in

1. Go to **https://phlposthr.com** and enter your email and password, then press **Sign in**.
2. The system emails you a **6-digit code**. Enter it on the next page and press **Verify**.
3. If the code doesn't arrive within a minute or two, check your spam folder, then use **Resend code**. **Use another account** goes back to the first step.

Step 1: email and password

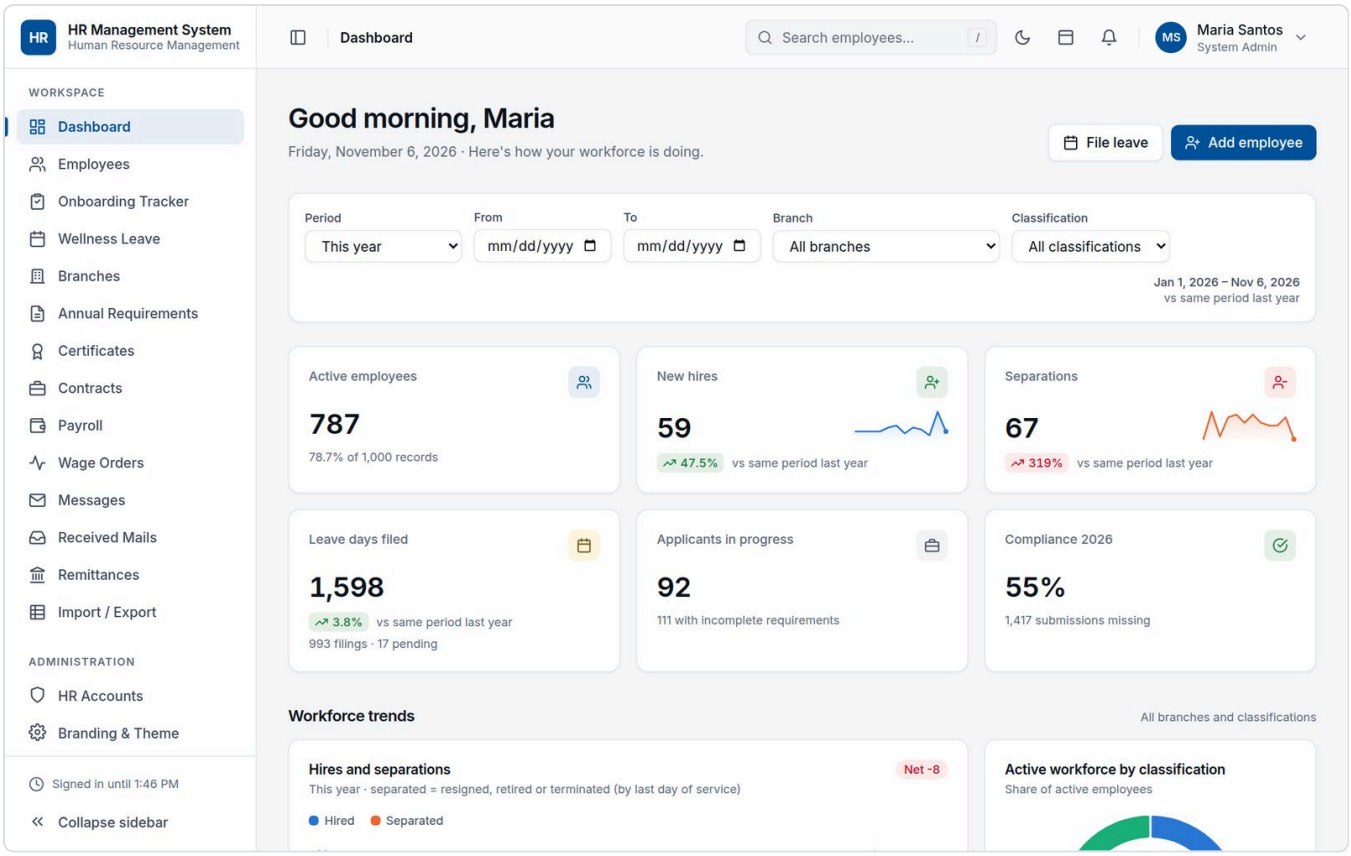

Step 2: the emailed 6-digit code

- **Sessions last 12 hours.** The time you'll be signed out is shown at the bottom of the sidebar: *Signed in until …*.
- **Five wrong passwords lock the account for 15 minutes.** A System Admin can unlock it sooner from **HR Accounts**.
- **Forgot your password?** Use **Forgot password?** on the sign-in page to get a reset link by email.
- **Signing out:** open the account menu (your name, top right) and choose **Log out**. Always sign out on a shared computer.

> **Sign-in codes need email to work**
> If the office email stops working, nobody receives codes. The server administrator can print a code for an account that has already entered its password, using the command `php8.5 artisan hr:issue-login-code your@email`.

3 Getting around

The sidebar on the left, the top bar, and the Dashboard

The sidebar

The sidebar lists every part of the system. **Workspace** holds the everyday HR work, and **Administration** holds accounts, branding, email and the audit log. The page you're on is highlighted. On a phone or narrow window the sidebar hides behind the menu button at the top left.

Workspace	Used for
Dashboard	Workforce numbers and charts at a glance
Employees	Employee profiles, employment and pay history
Onboarding Tracker	Applicants and their requirements for employment
Wellness Leave	Leave filings, yearly allowance and holidays
Branches	Post offices and who works where
Annual Requirements	ITR, Sworn Declaration, PDS and IPCR compliance
Certificates	Numbered certificates of employment
Contracts	Contracts of service for COS workers
Payroll	Payroll periods and payslips
Wage Orders	Regional minimum wages, and applying raises
Messages	Emails to employees and their delivery status
Received Mails	A log of mail that reaches the office
Remittances	Monthly SSS, Pag-IBIG and CMPEAI lists and vouchers
Import / Export	Excel imports and exports, and duplicate checks

The top bar

- **Sidebar button** (left): collapses the sidebar to icons, for more room.
- **Breadcrumbs**: show where you are, for example *Home › Employees › Navarro, Christian N.* Click a part to go back to it.
- **Search employees**: type a name or employee ID and press Enter. The shortcut is the **/** key.
- **Moon icon**: switches between light and dark mode. **Calendar-style icon**: makes the header compact.
- **Bell**: your notifications, with a count of unread ones.
- **Your name**: the account menu, with My profile, HR accounts ADMIN, Email server ADMIN, Branding & theme, layout preferences (collapsed sidebar, sidebar on the right, compact header) and Log out.

Lists

Most pages start with a list. You can search it, filter it (some pages have **Advanced filters**), and sort it by clicking a column heading. Long lists are split into pages, with **Previous** and **Next** at the bottom. Click a row to open the record. **Export** buttons download the list you're looking at, with your filters applied, as an Excel file.

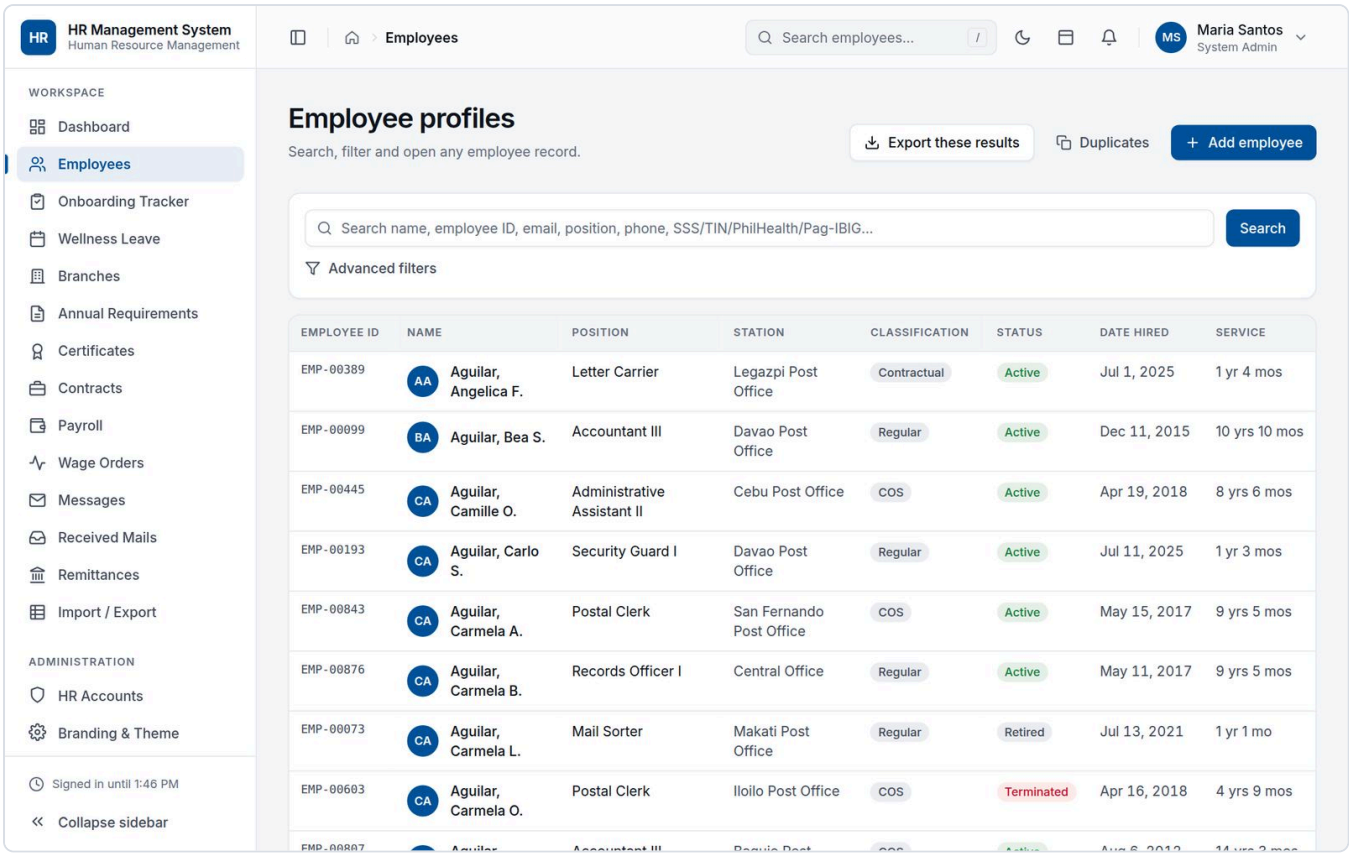

4 Dashboard

The Dashboard is the first page after signing in. It shows how the workforce is doing for the period you choose.

- **Period**: this month, last month, last 90 days, this year, last 12 months or the last 10 years. You can also set your own range with **From** and **To**.
- **Branch** and **Classification** (COS, Contractual, Regular) narrow every number on the page.
- **Cards**: active employees (as of the end of the period), new hires, separations, leave days filed, applicants in progress and requirements compliance. Each is compared with the same period last year. Click a card to open the matching list.
- **Charts**: hires and separations over time, the workforce by classification, by gender and by position, leave by month, and compliance by requirement.
- Lists of the latest hires, pending leave, the latest payroll and recent activity.
- `File leave` and `Add employee` are shortcuts to the two most common tasks.

> **Tip**
> Charts have a **View as table** link that shows the same numbers as a table you can read or copy.

5 Employees

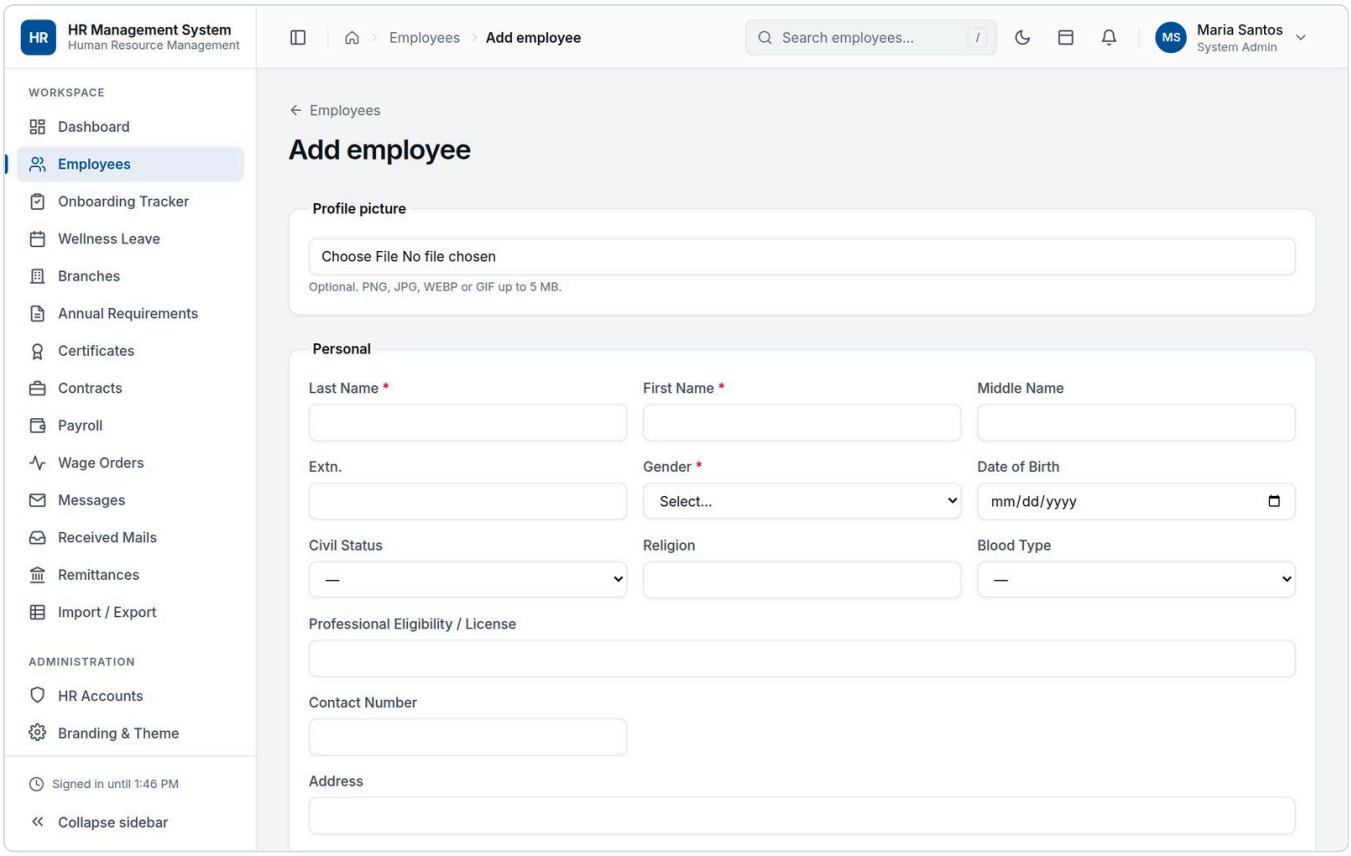

Employees: search, filters, export and the employee list

Finding an employee

Search by name or employee ID. Open **Advanced filters** to filter by station, classification, status, gender, position or date hired. `Export these results` downloads the filtered list to Excel. `Duplicates` checks for people entered twice (see Import / Export).

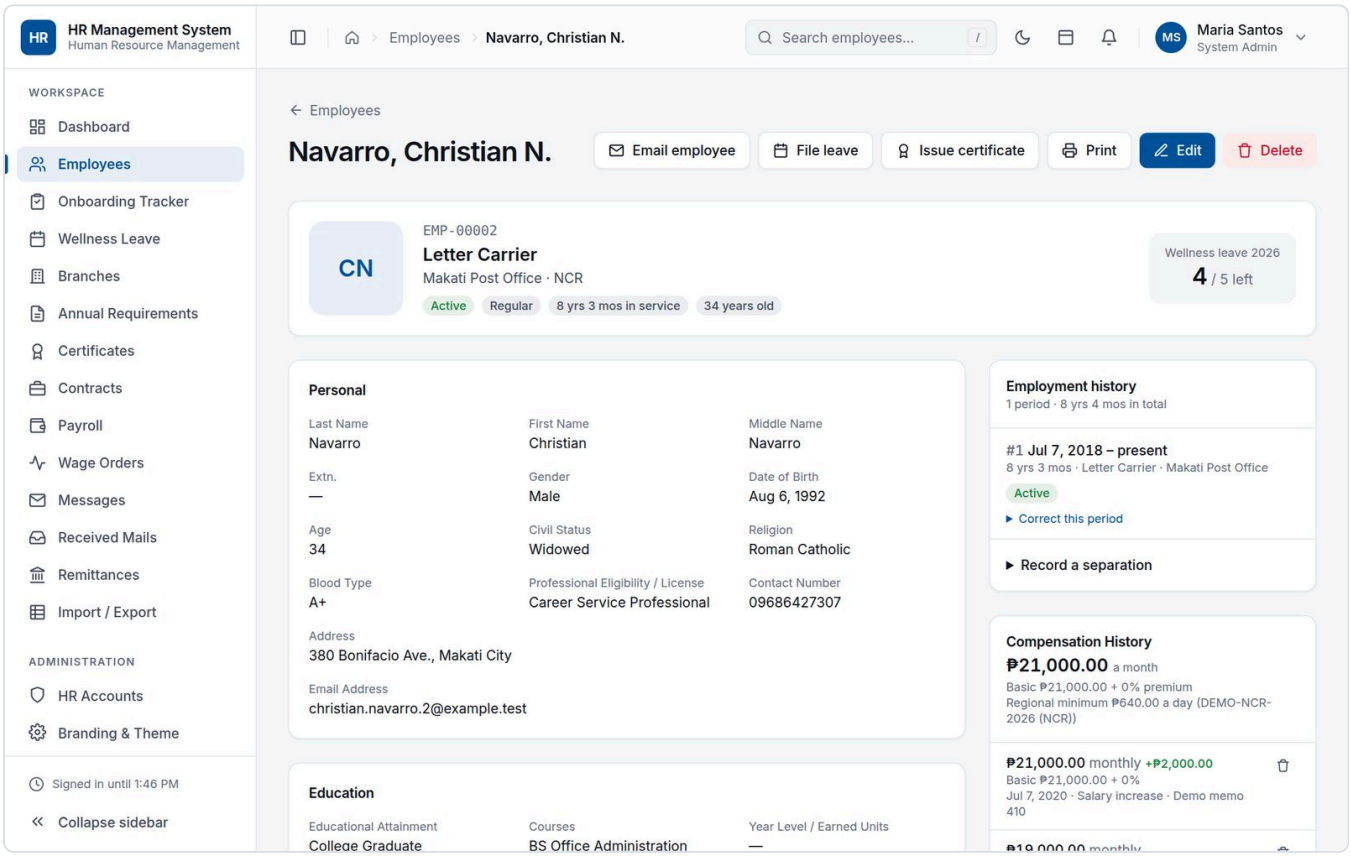

Adding an employee

1. Press `Add employee`.
2. Fill in the sections: profile picture (optional), personal details, contact, education, employment (ID, position, station, classification, status, date hired), government IDs (TIN, SSS, PhilHealth, Pag-IBIG), bank account, and emergency contact.
3. Press **Save**. The system checks the format of government ID numbers and warns about a likely duplicate (same name and birth date, or the same email or ID number).

The Add employee form

The employee profile

An employee profile, with the actions at the top

The top of the profile shows the position, station, status, classification, years in service, age and the wellness leave left this year. The actions are:

- **Email employee**: write a message to this person (see Messages).
- **File leave** and **Issue certificate**: start those forms with this employee already chosen.
- **Print**: a printable profile with the office letterhead.
- **Edit** and **Delete**. Delete is refused while the employee has leave, payslips, certificates or contracts; mark the employee as separated instead.

Employment history

Each period of service is listed with its dates, position and station. Use **Record a separation** when someone resigns, retires or is terminated, and **Correct this period** to fix a wrong date or position. Someone who comes back after leaving gets a new period, so their total service stays right.

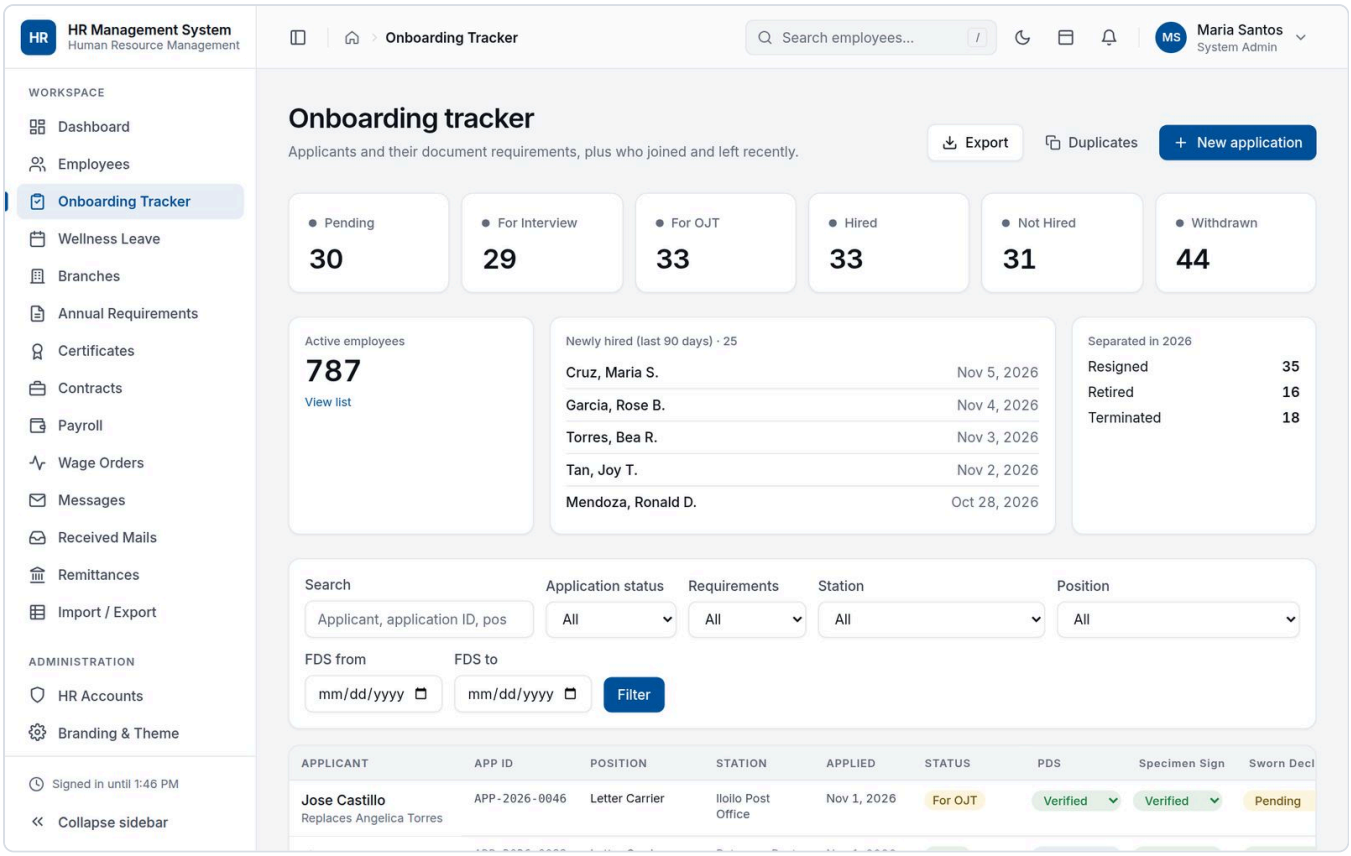

Compensation History

Shows the current pay (basic rate plus premium, for example 15%) and every change before it. Use **Record a salary increase or rate** for a new rate, with its effective date and reference, such as a memo or wage order number. The regional minimum wage for the employee's station is shown for comparison.

Promotions and demotions

Use **Record a promotion or demotion** to log a change of position with its date. The current position on the record is updated to match.

6 Onboarding Tracker

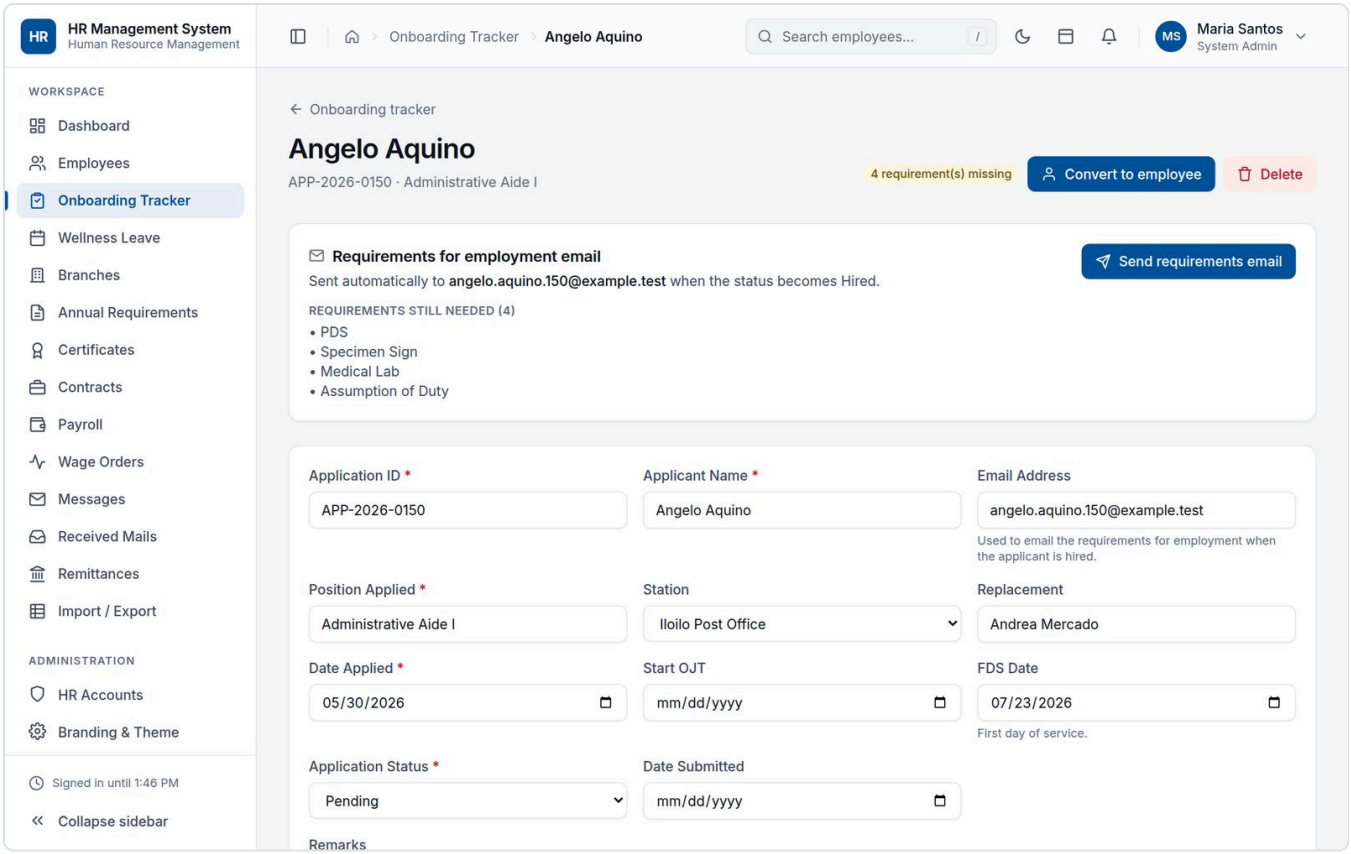

Onboarding: status counts, recent hires and separations, then the applicant list

The tracker follows applicants from application to their first day, and keeps track of their requirements for employment.

- The cards at the top count applicants by status: **Pending, For Interview, For OJT, Hired, Not Hired, Withdrawn**. Beside them are the active headcount, people newly hired in the last 90 days, and separations this year.
- The list can be searched and filtered by status, requirements (complete or missing), station, position, and FDS (first day of service) date range. The status can be changed straight from the list.
- `New application` adds an applicant. The Application ID is assigned automatically, for example APP-2026-0001.

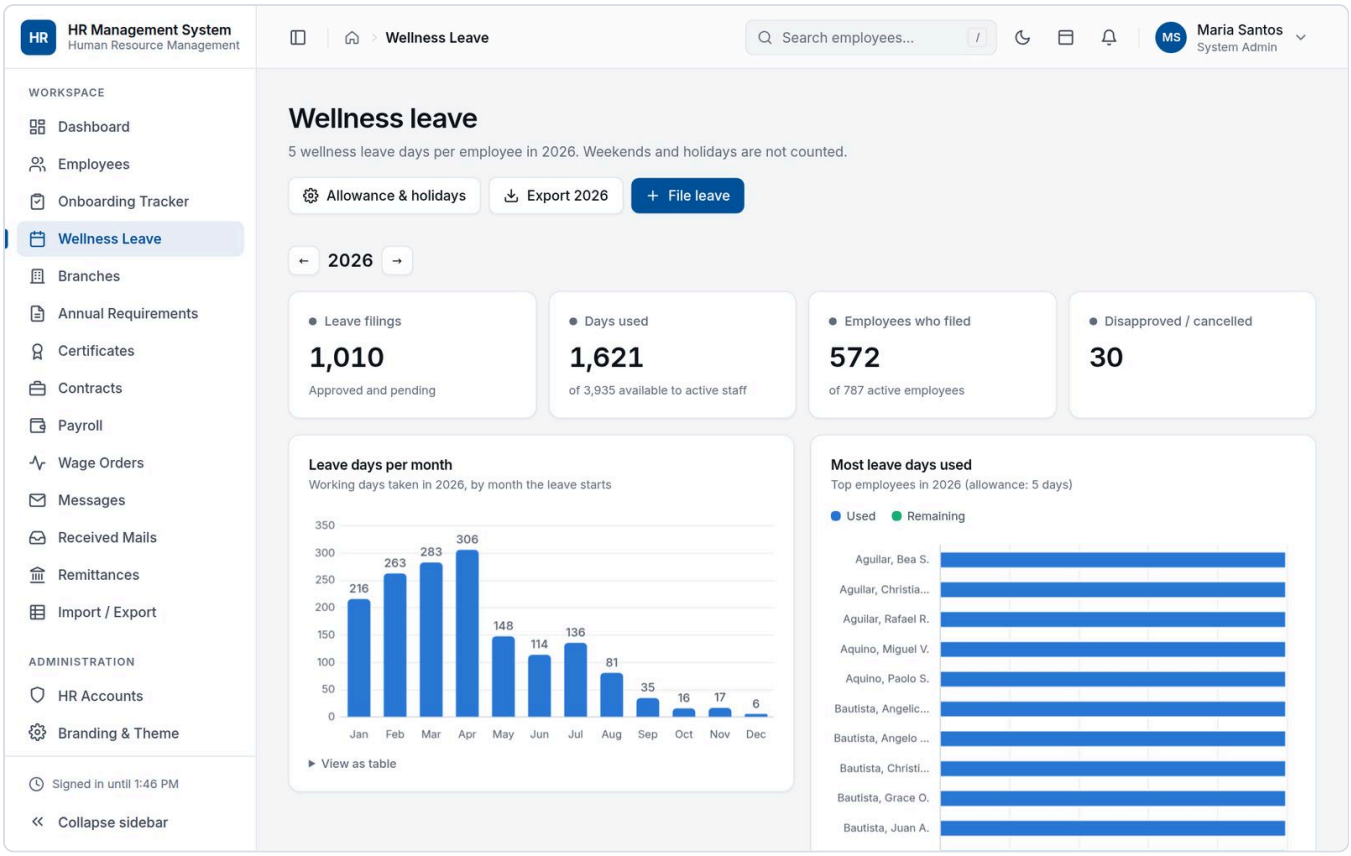

An applicant's page

An applicant, with the requirements still needed

- Tick each requirement as it is received: PDS, specimen signature, medical and lab results, assumption of duty and the others listed. The page shows which are still missing.
- When the status becomes **Hired**, the applicant automatically gets the *Requirements for employment* email, if they have an email address and the email is turned on in Email Settings. **Send requirements email** sends it again.
- **Convert to employee** creates the employee record from the application. The date hired is the **FDS Date** when it is set, otherwise the Start OJT date.

7 Wellness Leave

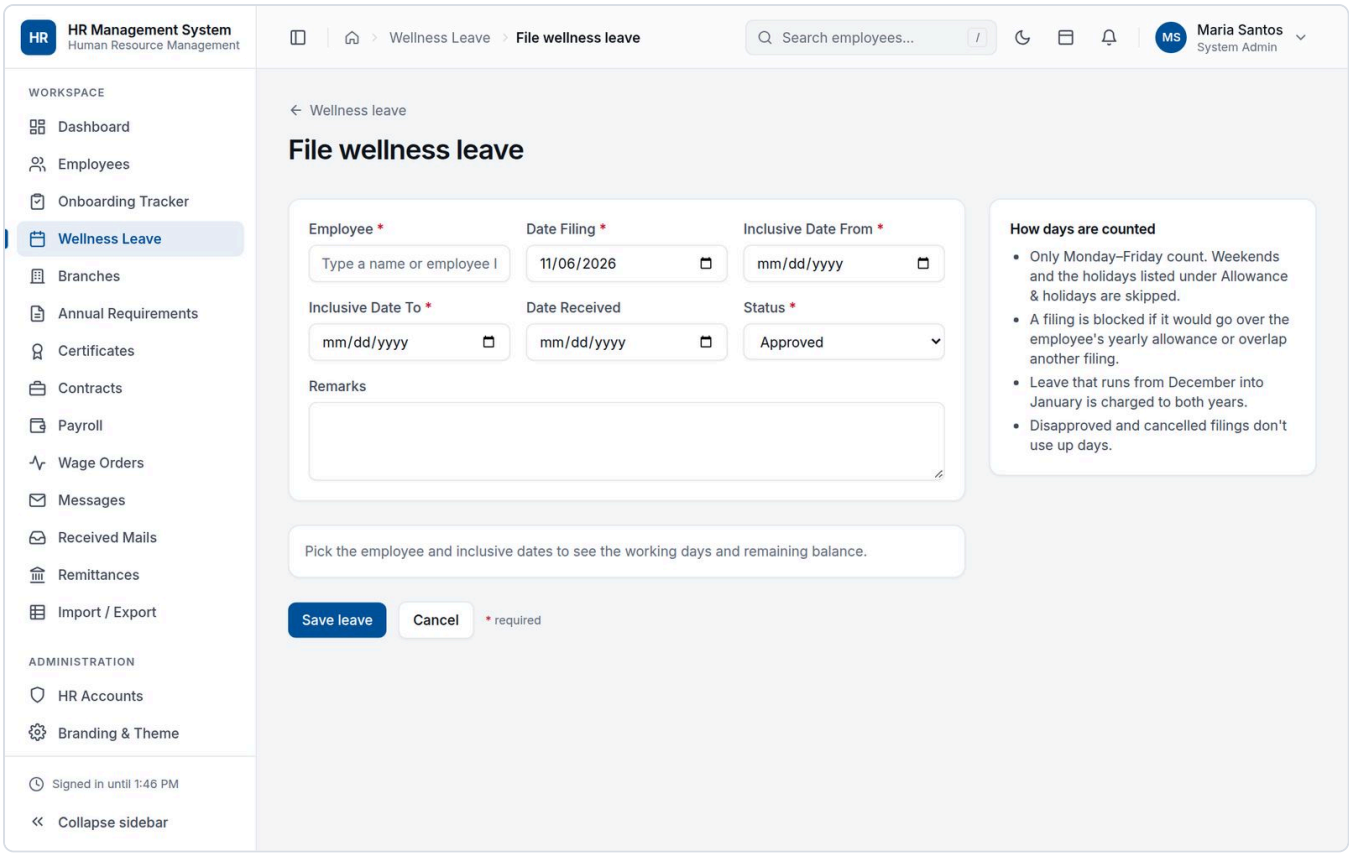

Wellness Leave: totals, charts and the filings for the year

Each employee has a yearly allowance of wellness leave days (5 by default). Use the arrows beside the year to look at another year. The page shows filings, days used, who filed, the leave days per month, and the employees who used the most.

Filing leave

1. Press **File leave**.
2. Type part of the employee's name or ID in the **Employee** box and pick them from the list.
3. Enter the date filed and the inclusive dates (from and to), the date received, the status and any remarks.
4. The preview on the right shows how many working days it uses and how many remain. Press **Save leave**.

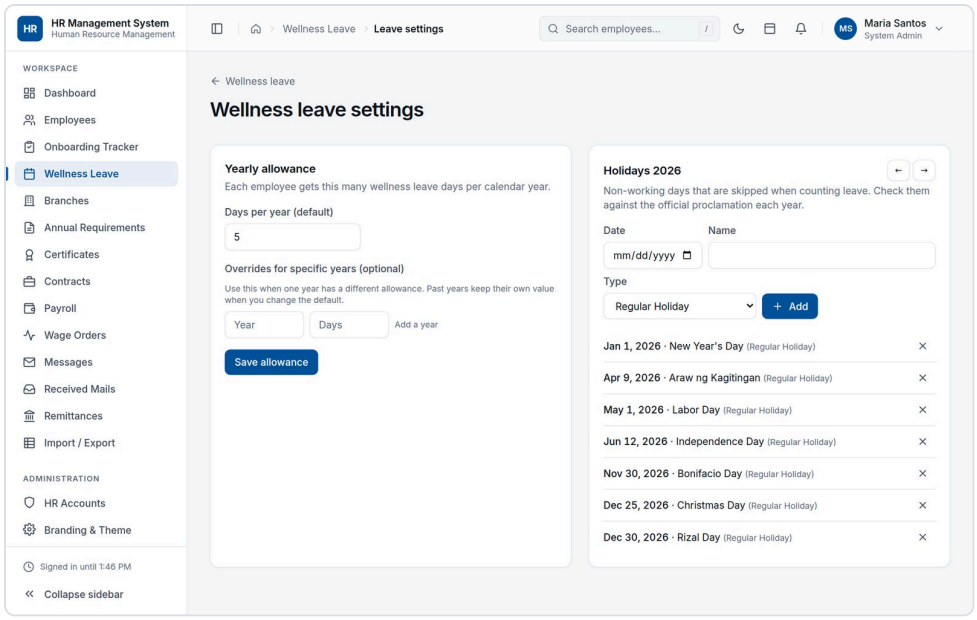

Filing wellness leave, with the live day count

> **How days are counted**
> Only Monday to Friday count, and holidays are skipped. A filing is refused if it goes over the employee's allowance or overlaps another filing. Leave from December into January is charged to both years. Disapproved and cancelled filings don't use any days.

When leave is filed, and again when its status changes, the employee is emailed if those emails are turned on in Email Settings.

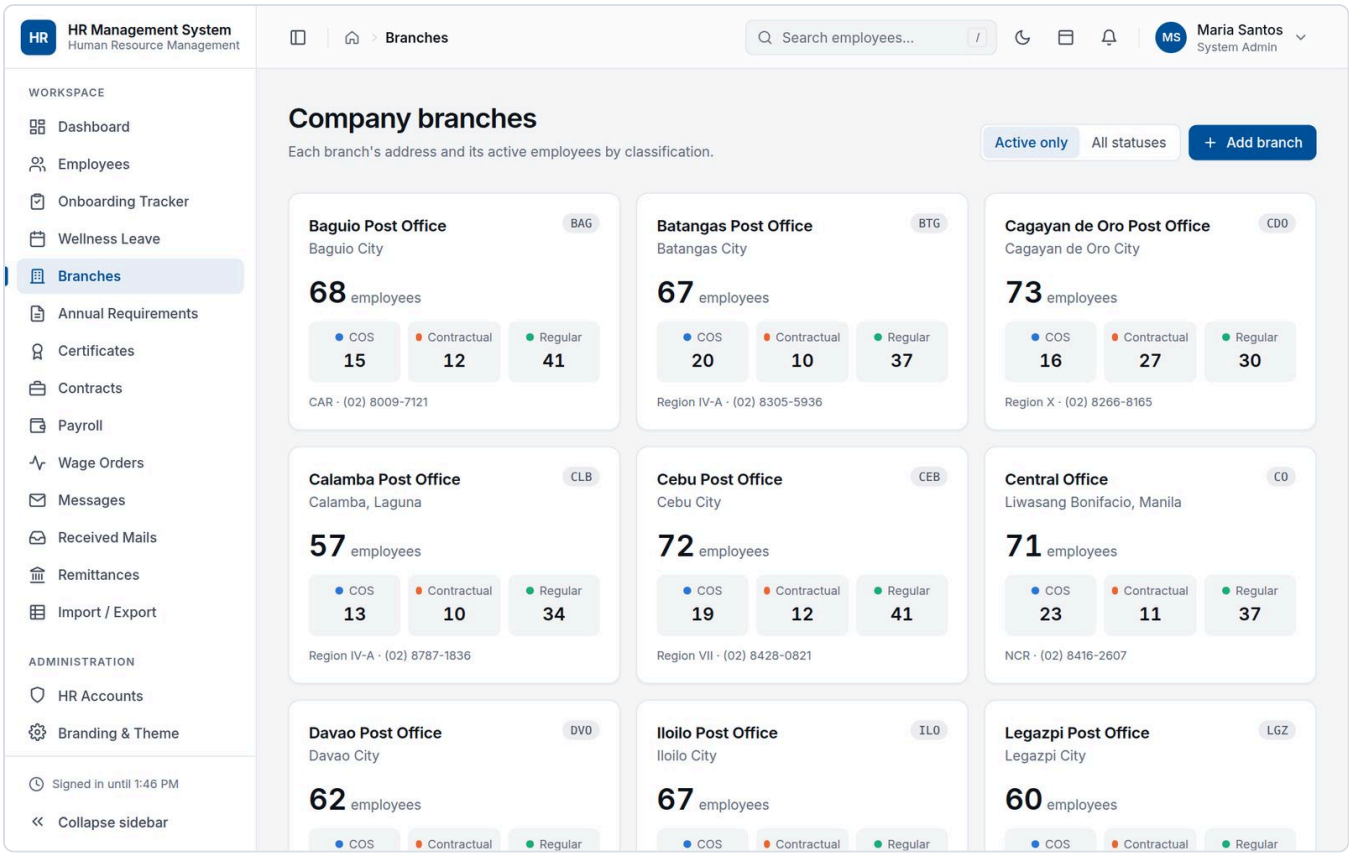

Allowance & holidays

Allowance & holidays sets the yearly allowance, with optional overrides for a particular year, and the list of holidays for each year. Check the holidays against the official proclamation every year, and add special non-working days, local holidays and office closures as they are announced.

Yearly allowance and the holiday list

8 Branches

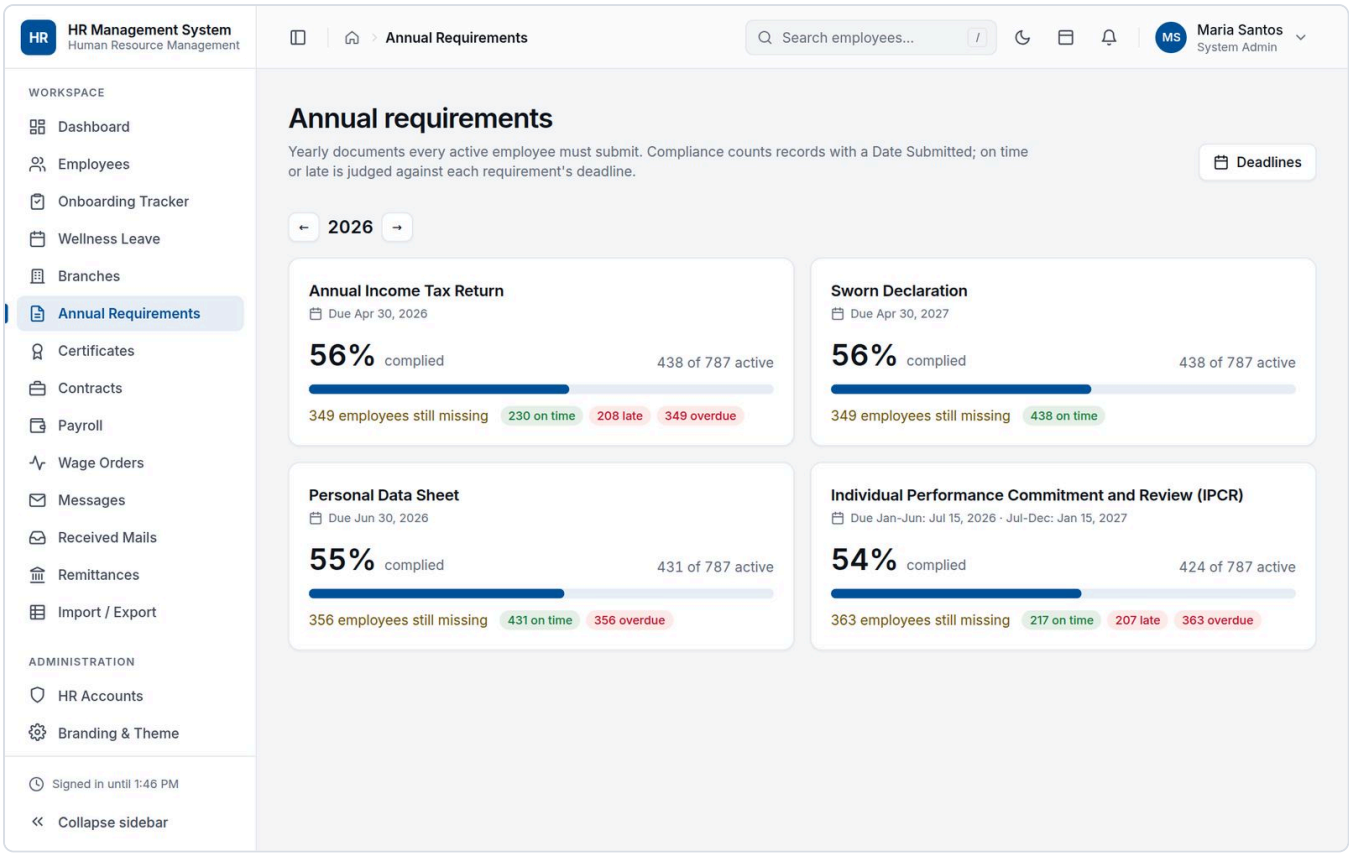

Branches, with active employees by classification

Branches are the post offices and offices where employees are stationed. Each card shows the address and active employees by classification, and the chart compares the branches.

- Add branch: name, address, region and contact details. The region decides which regional minimum wage applies to its employees.
- Open a branch to see everyone assigned to it, and use **Search employees here** to jump to the Employees list filtered to that branch.
- A branch can only be deleted when nobody is assigned to it.

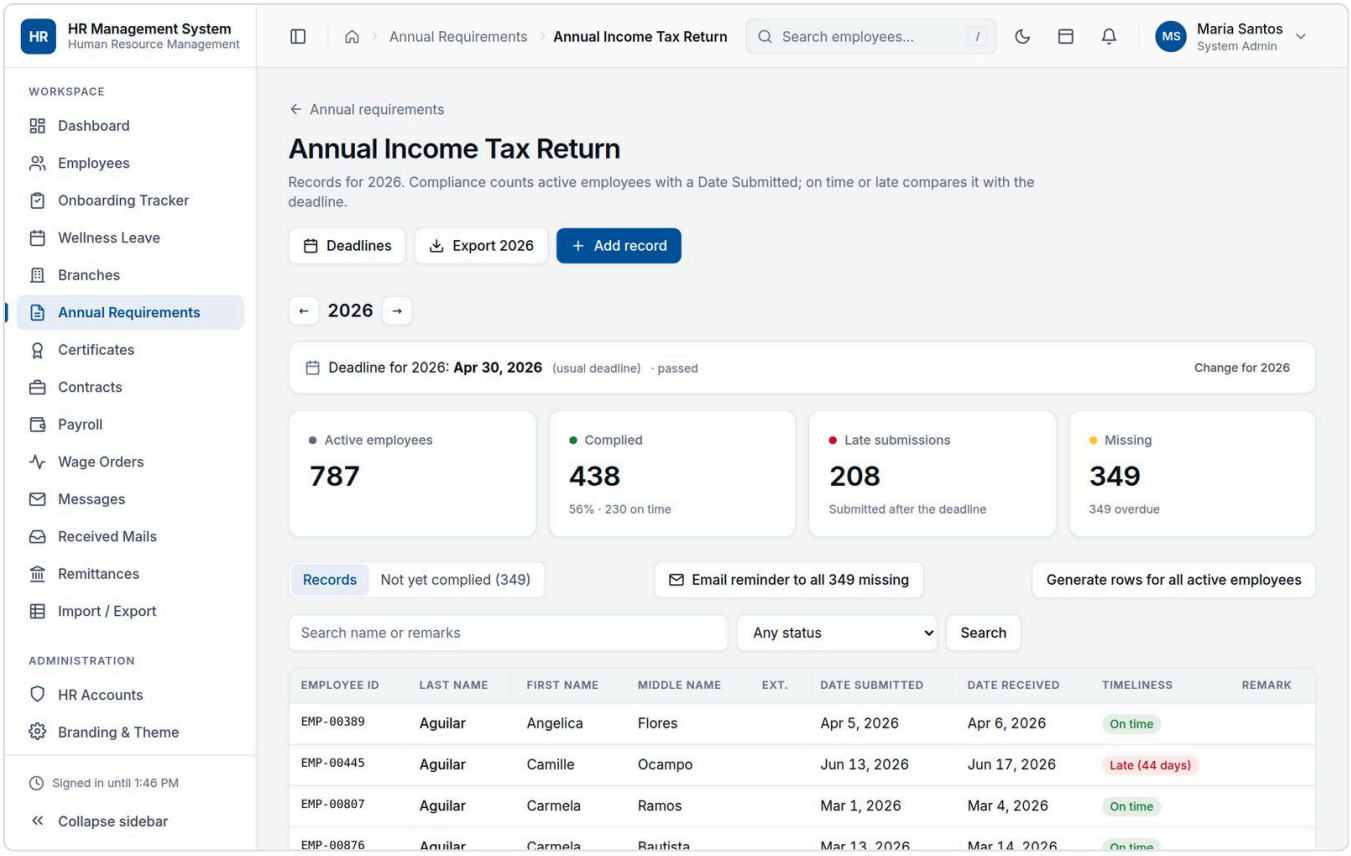

9 Annual Requirements

The four annual requirements and their deadlines

Tracks the yearly documents every active employee must submit: the **Annual Income Tax Return (ITR)**, the **Sworn Declaration**, the **Personal Data Sheet (PDS)**, and the **IPCR** rating, which has two periods (January–June and July–December).

Working with one requirement

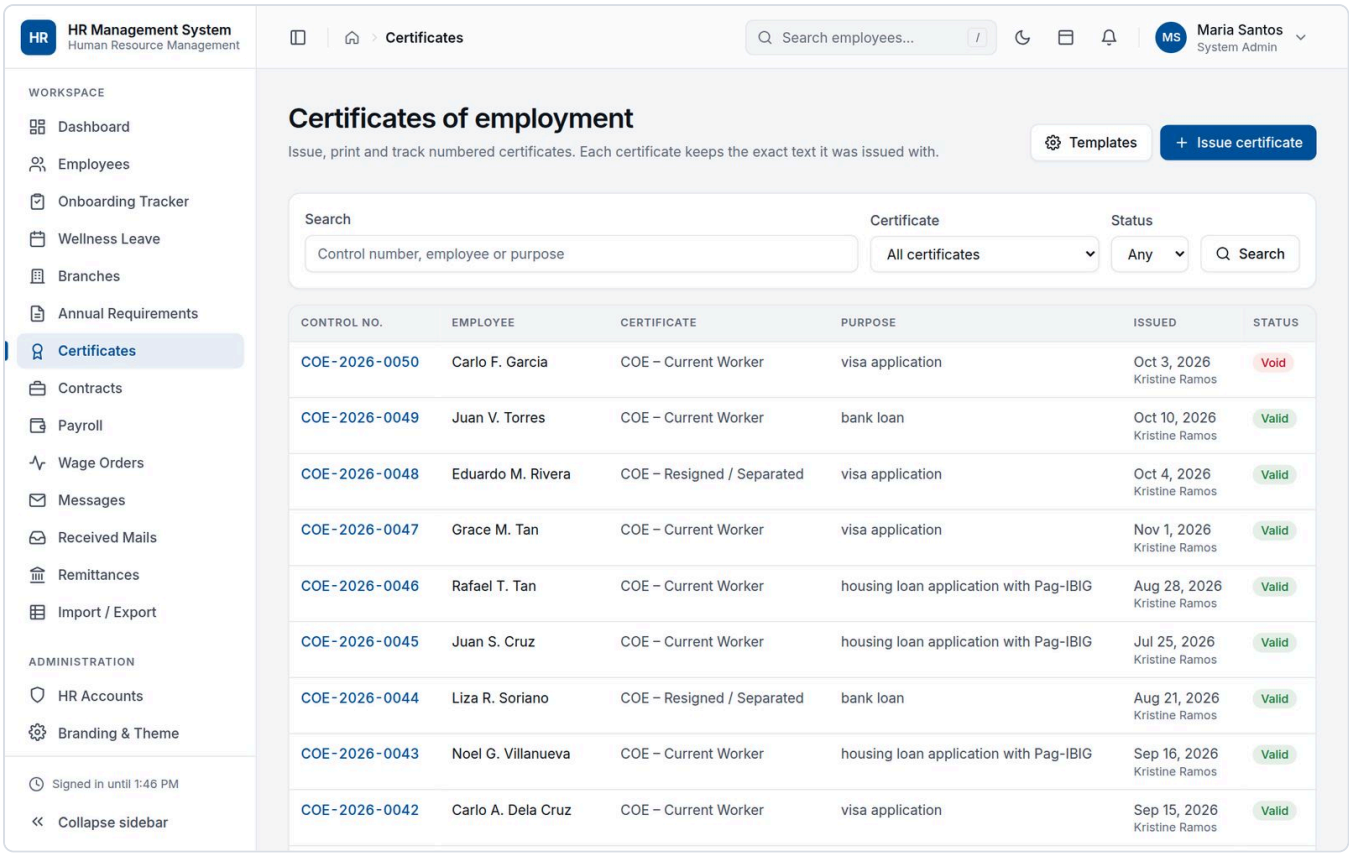

One requirement: compliance, late and missing, and the records

- The cards show how many active employees complied, how many submitted late, and how many are missing.
- **Generate rows for all active employees** adds an empty record for everyone who doesn't have one yet, so you only fill in dates.
- **Add record** or open a row to enter the date submitted, the date received and a remark.
- Filter by timeliness: On time, Late, Pending, Overdue, or Submitted (no deadline).
- **Email reminder to all … missing** sends one reminder to everyone who hasn't complied yet.
- **Export** downloads the year's records to Excel.

Deadlines

Deadlines sets the usual deadline for each requirement. Tick **Following year** when, for example, the 2026 ITR is due in April 2027. For a year with a different date, add a **year-specific deadline**. A record is *On time* when submitted on or before the deadline, otherwise *Late*. Without a submission it becomes *Overdue* once the deadline passes.

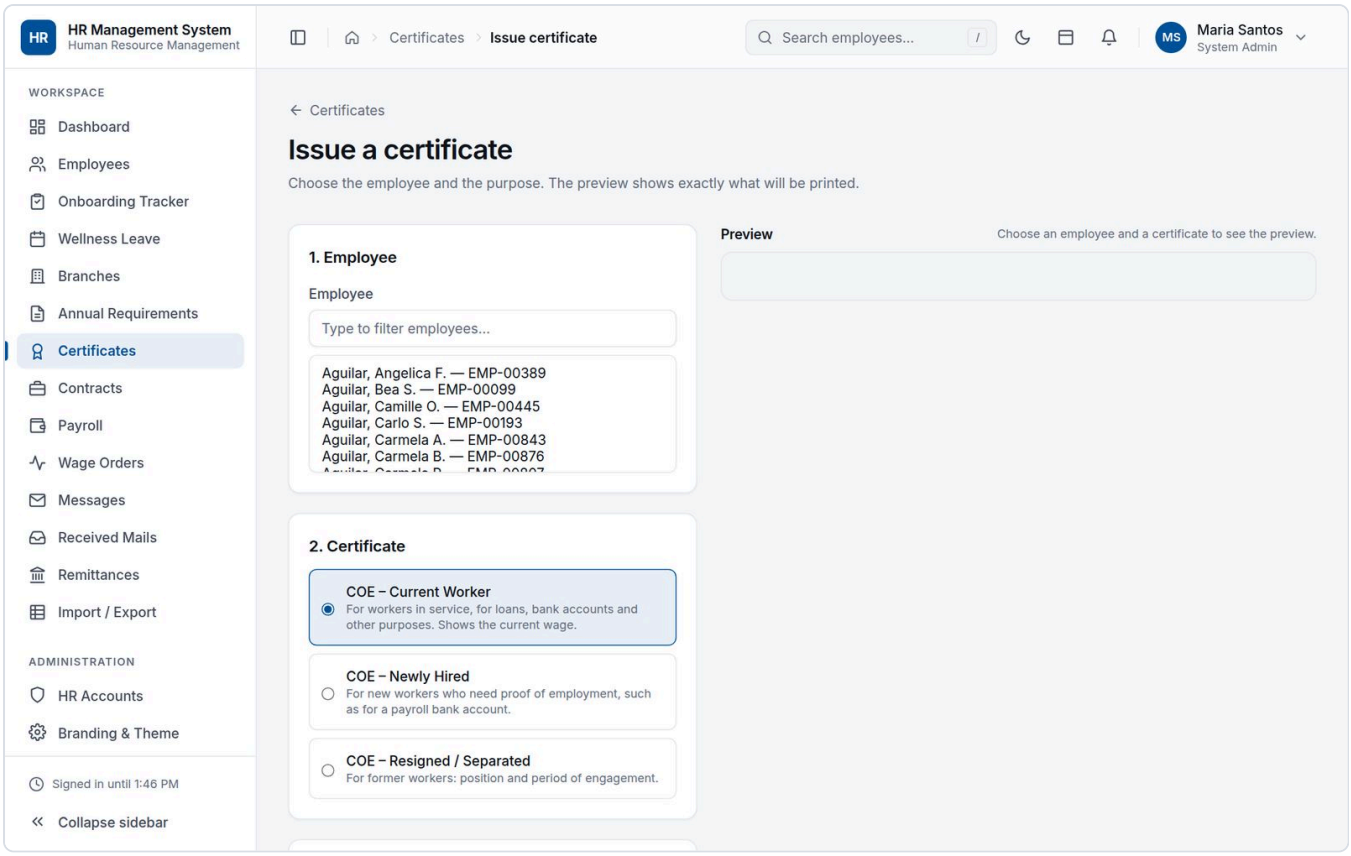

10 Certificates

Issued certificates, with search and filters

Issuing a certificate of employment

1. Press **Issue certificate**, or use **Issue certificate** on an employee's profile.
2. Choose the employee and the template: *COE – Current Worker* (shows the current wage), *COE – Newly Hired*, or *COE – Resigned / Separated*.
3. Enter the purpose, for example "bank loan". It fills the template's purpose wording; leave it blank for "whatever legal purpose it may serve".
4. Check the preview, then press **Issue certificate**. A control number is assigned, for example COE-2026-0001.

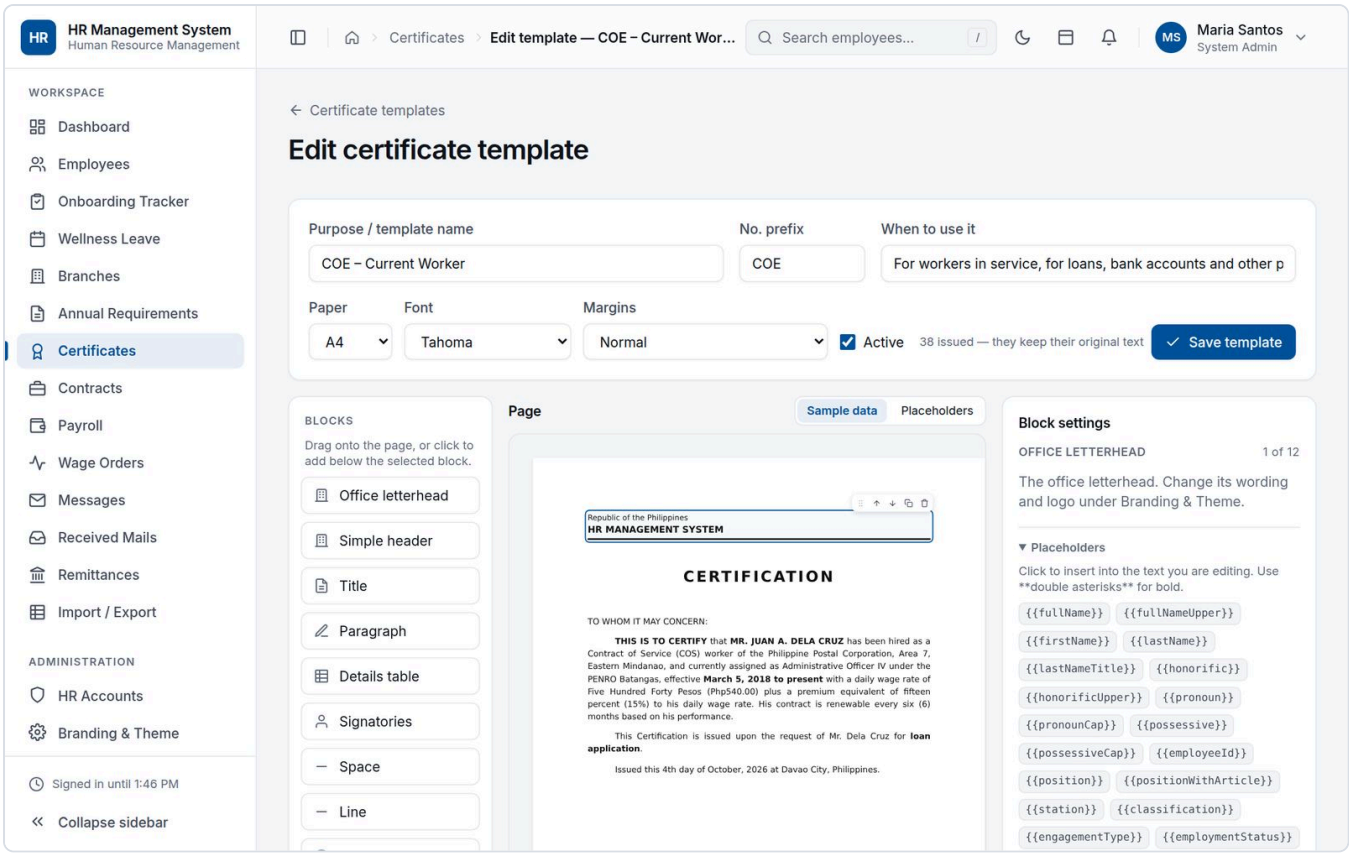

Issuing a certificate, with the live preview

After issuing

Open a certificate to Download PDF or Print. **Issue another like this** starts a new one with the same choices. **Void this certificate** marks a wrong one as void, but keeps it on record with its number. **Delete record** removes it from the numbered log entirely ADMIN.

Certificate templates

Templates lists one template per purpose. **Edit layout** opens the editor, where you drag blocks onto the page: office letterhead, title, paragraphs, details table, signatories, spacing, lines and footnotes. You also choose the paper (A4, Letter, Legal, Folio), the font, the margins and the number prefix. Paragraphs can use placeholders such as the employee's name, position and dates, which are filled in when you issue. **Duplicate** starts a new template from an existing one, and **Deactivate** hides a template from the issue form.

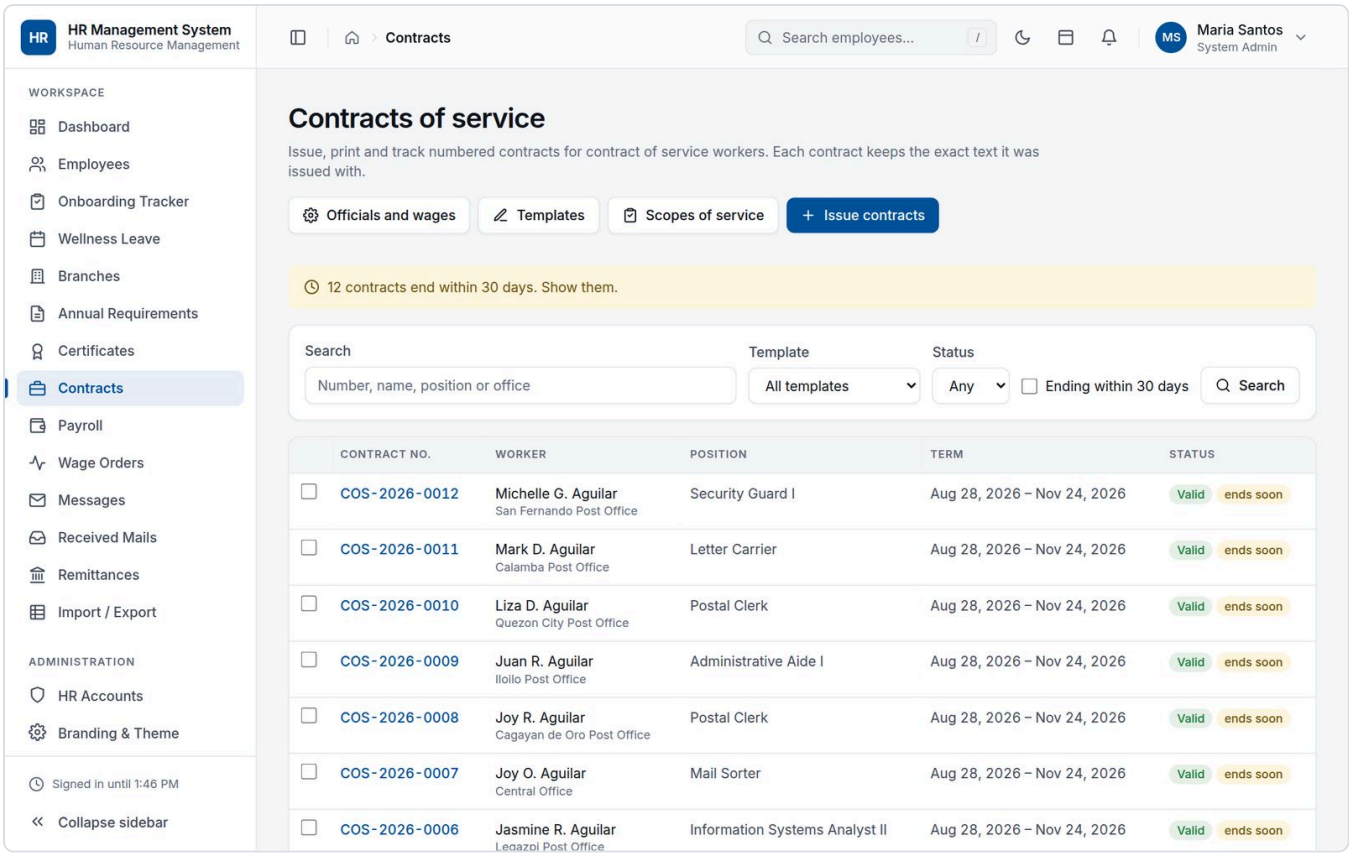

The template editor: blocks on the left, the page in the middle

Changing a template

Changes apply to certificates issued from then on. Certificates already issued keep the text they were issued with.

11 Contracts

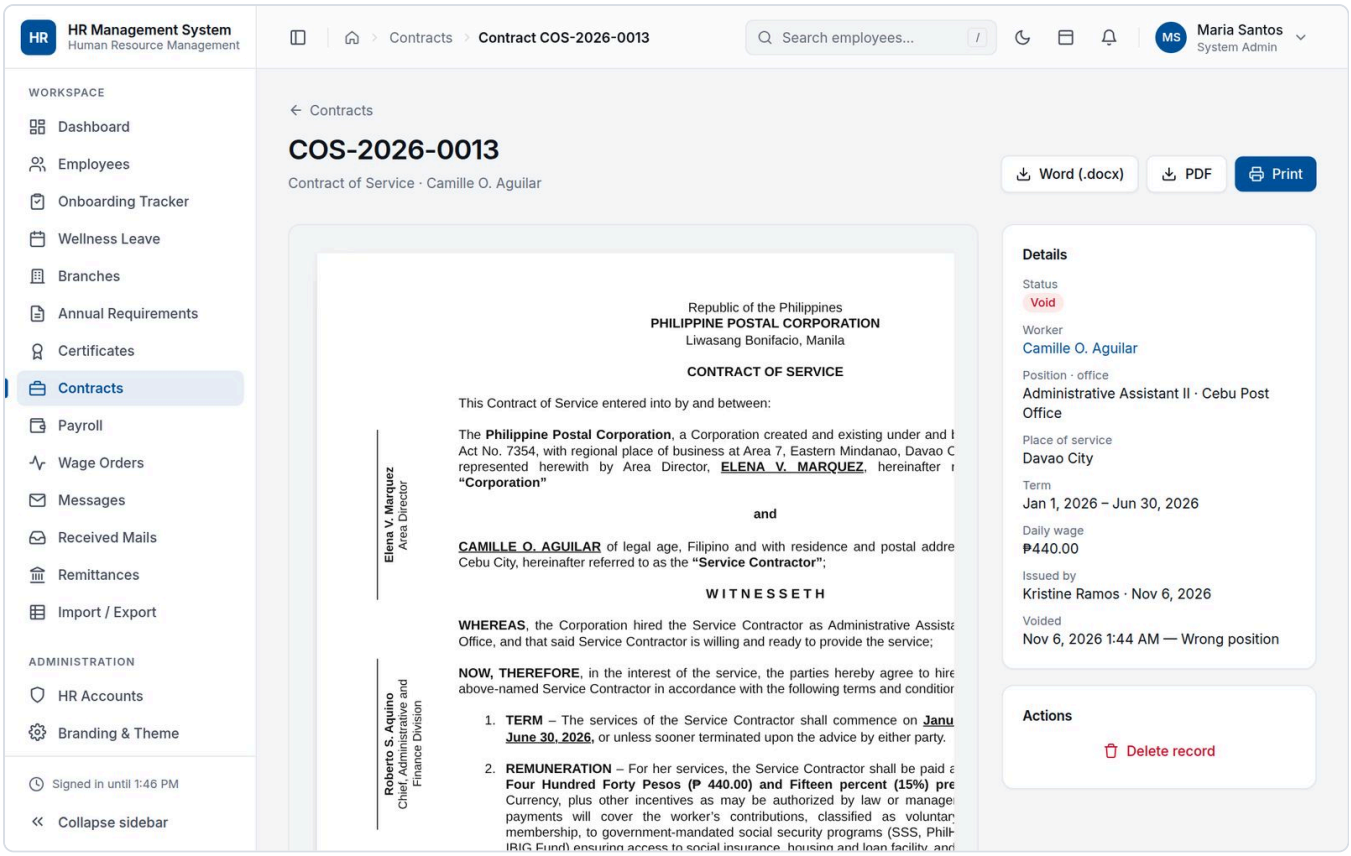

Contracts of service, with those ending within 30 days highlighted

Contracts of service for COS workers follow the office's Contract of Service layout: Folio paper, the clause numbering, the signatures, the acknowledgement, and the four officials' names in the left margin of every page. The list highlights contracts **ending within 30 days**, so renewals aren't missed.

Issuing contracts for a term

1. Press **Issue contracts**. Choose the template and enter the start and end of the term, then press **Find workers**.
2. The list shows active COS workers who don't already have a valid contract overlapping those dates. Tick the ones to issue.
3. Check each person's scope of service, daily wage, premium and place of service, and change any that differ.
4. Issue them all together. Each contract gets its own number, for example COS-2026-0001.

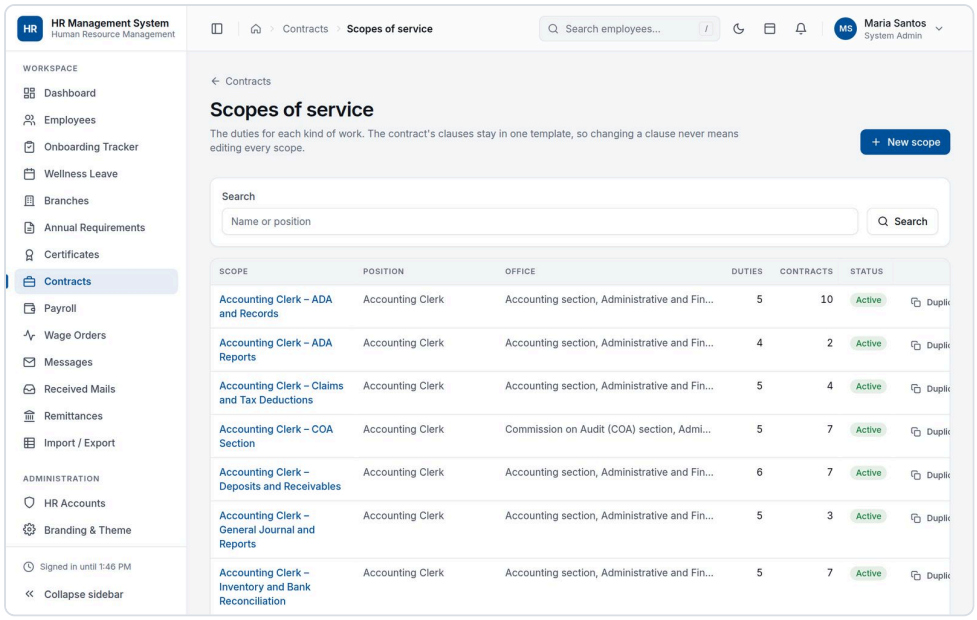

An issued contract

Printing and downloading

- **Print** opens the contract for the browser's print dialog. Choose Folio (8.5 × 13 in) paper.
- **Word** downloads an editable .docx, and **PDF** downloads a PDF. All three match the office's 3-page layout.
- Tick several contracts in the list to download them as one ZIP of Word or PDF files.
- **Void** marks a wrong contract as void and keeps its number on record. Deleting a contract from the log is for System Admins only ADMIN.

Templates, scopes and settings

- **Templates**: the contract clauses, edited with the same block editor as certificates. Clause lists use simple markup: ***bold***, *~~underlined~~*, and lines starting with "1.", "6.1" or "a." for numbered clauses.
- **Scopes of Service**: the duties for each kind of work (27 are included, such as Letter Carrier and Accounting Clerk). The duties are kept apart from the clauses, so changing a clause never means editing every scope.
- **Settings**: the names and titles of the four signing officials (Area Director, Chief of AdFin, Chief of HRM, Budget Officer), the wage order wording and the default place of service.

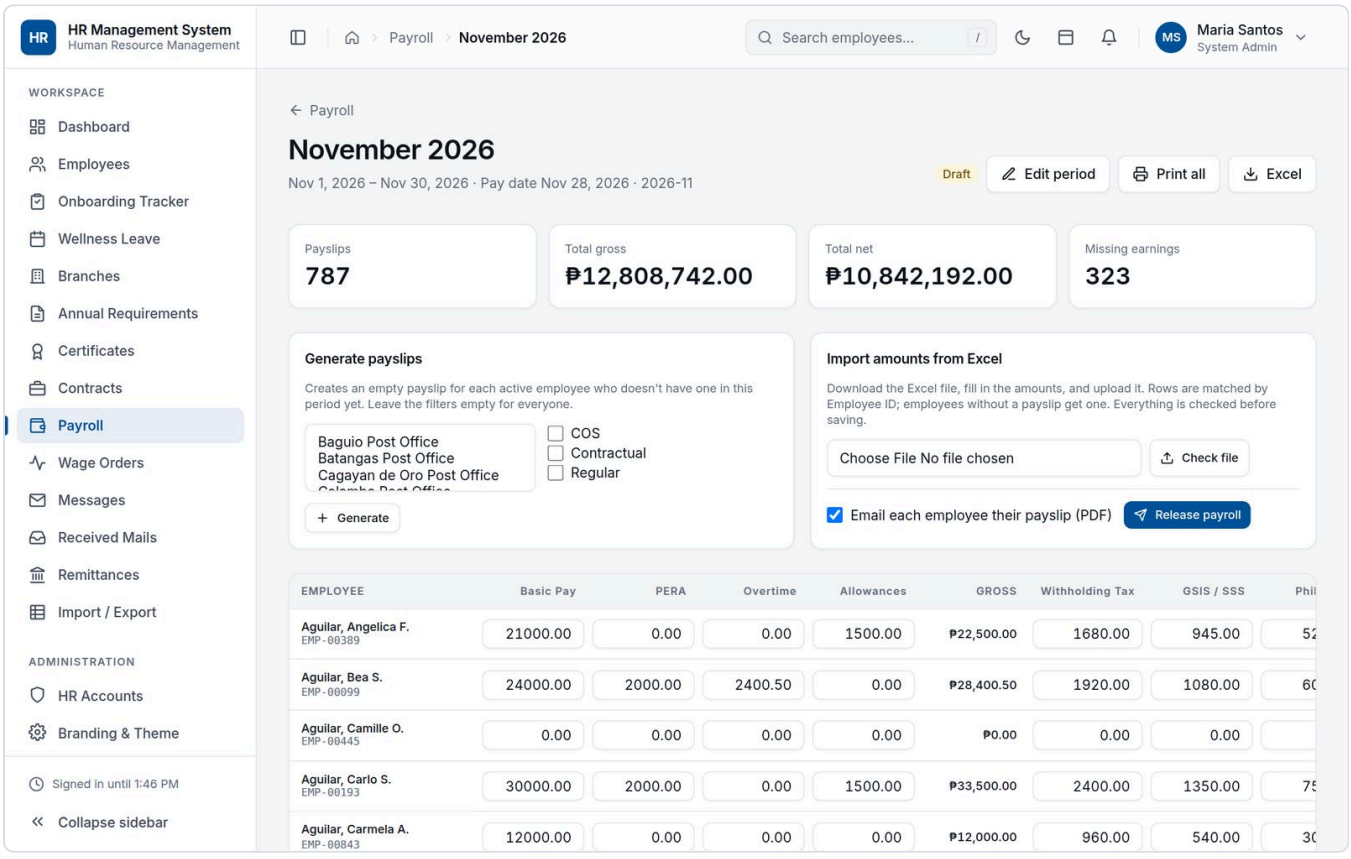

The Scope of Service library

12 Payroll

HR enters the amounts. The system adds up the totals, prints the payslips and emails them to employees as PDFs.

Running a payroll period

1. **New payroll period**: give it a name, such as "November 2026 — 1st half", a short unique code, such as 2026-11-A, the dates and the pay date.
2. **Generate payslips**: creates an empty payslip for each active employee, optionally filtered by branch or classification.
3. **Enter the amounts**, in one of two ways:
   - type them in the grid, which works like a spreadsheet, then save; or
   - use **Import amounts from Excel**: download the file, fill in the amounts and upload it. Rows are matched by employee ID, and everything is checked before anything is saved.
4. **Check** the totals, open single payslips to correct them, and print the payroll or export it to Excel.
5. **Release payroll**: locks the period and, if turned on, emails every employee their payslip as a PDF.

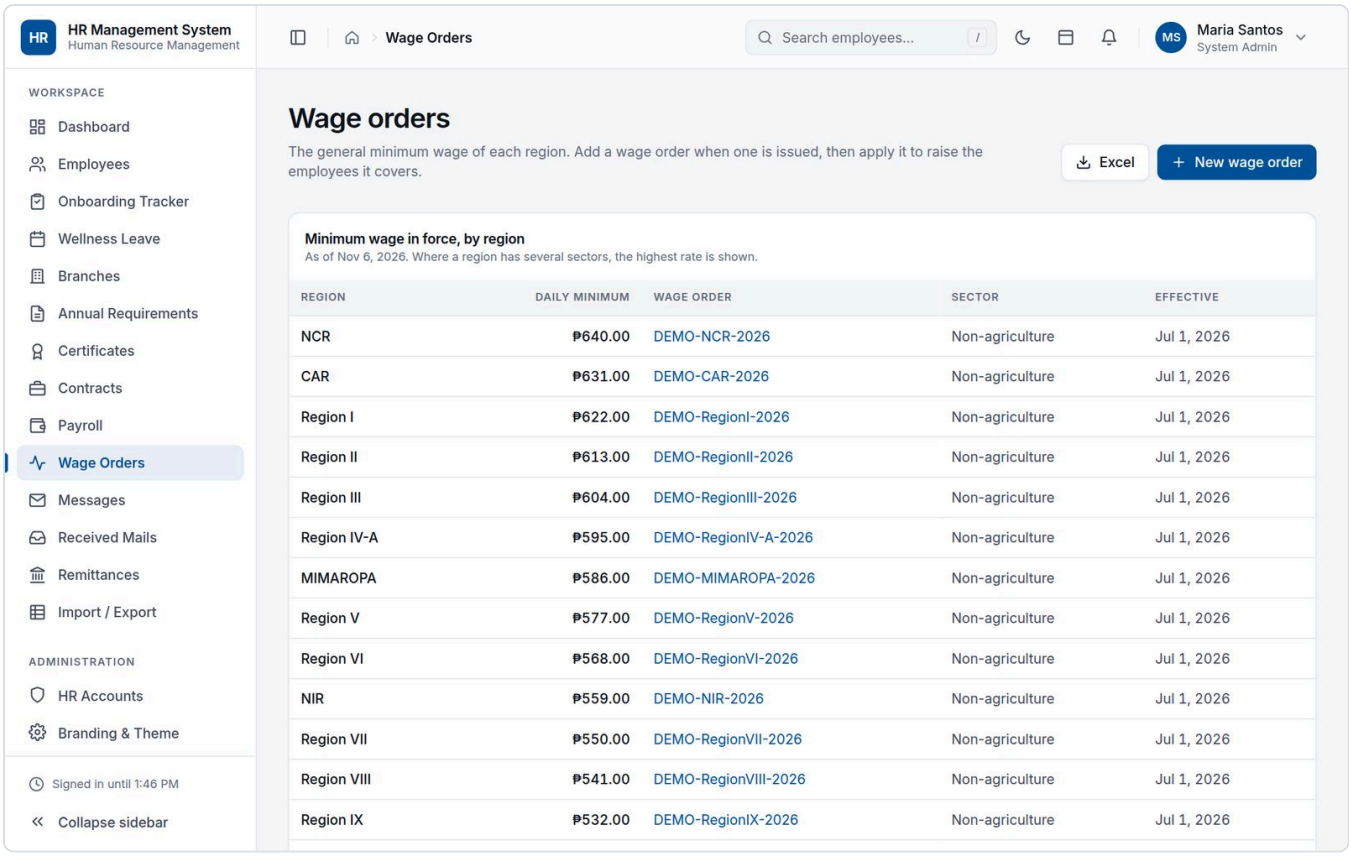

A payroll period: generate, import, release, and the amounts grid

> **After release**
> A released period can't be edited or deleted, so check it first. You can still print it, export it and resend a single payslip.

Payslip template sets the payslip header lines, whether to show the logo, and the earning and deduction items, which become the grid and Excel columns. Renaming an item doesn't change payslips already saved.

13 Wage Orders

The regional minimum wage in force, and all wage orders

Wage orders record each region's daily minimum wage and the date it took effect. The top table shows the rate in force today for every region.

1. When a new wage order is issued, press **New wage order** and enter the region, order number, sector, daily rate and effective date.
2. Open it to see which employees it covers: those whose pay is below the new rate, and COS or contractual workers with no rate yet.
3. Press **Apply** to record the new rate in their Compensation History from the effective date. The premium (for example 2% or 15%) is set when applying and carried forward from each person's last rate.

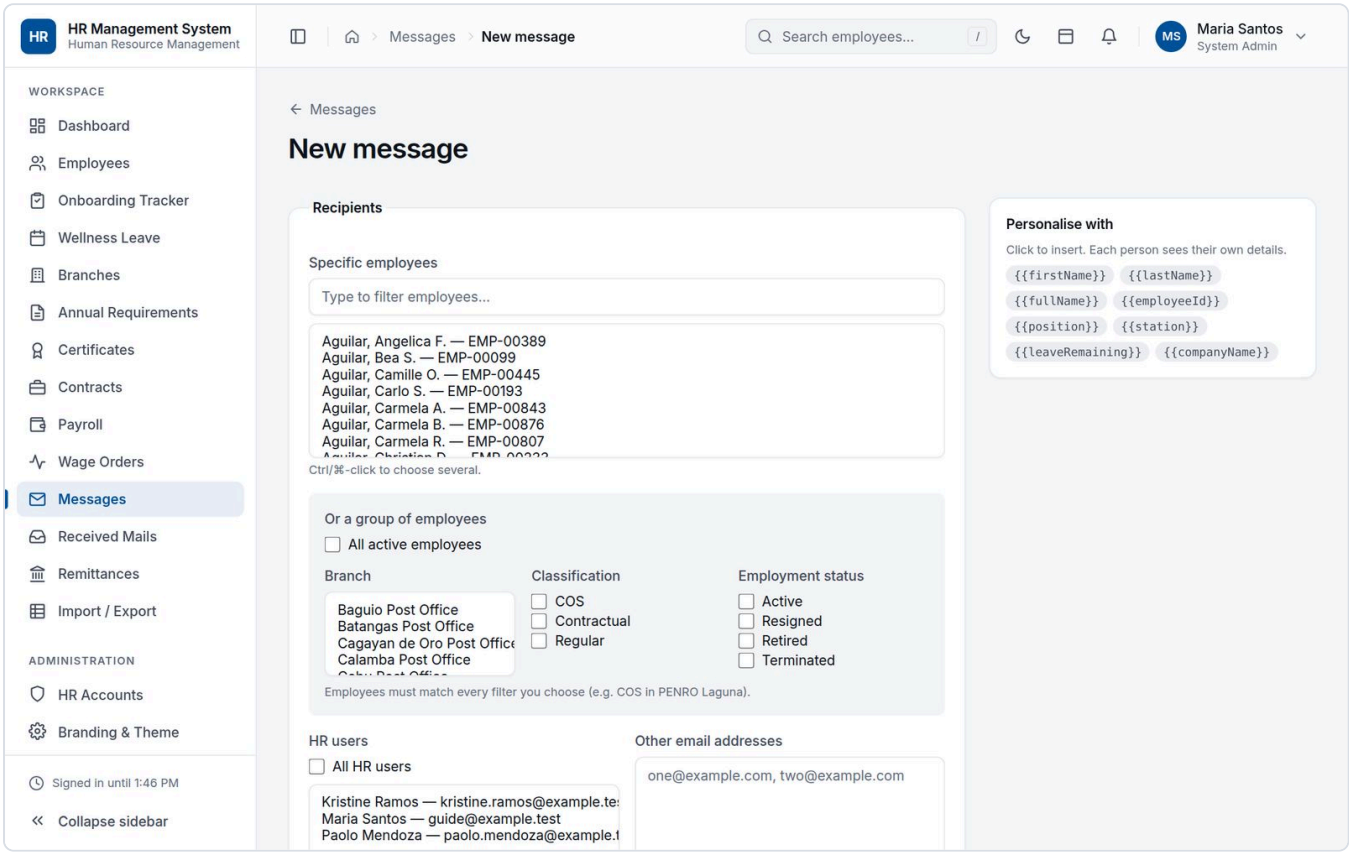

> **Tip**
> Wage orders can also be imported from Excel on the Import / Export page.

14 Messages

Messages lists every email the system has sent, such as announcements, reminders, leave notices and payslips, with how many were delivered.

Sending a message

1. Press **New message**, or **Email employee** on a profile.
2. Choose the recipients: pick people (Ctrl or ⌘ click to choose several), or a group by branch, classification and status. People must match every filter you choose.
3. Optionally **start from a template**, then write the subject and message. Insert placeholders, such as the employee's name; each person sees their own details.
4. Attach files if needed (PDF or images, up to 5 MB in total), check the preview, and send.

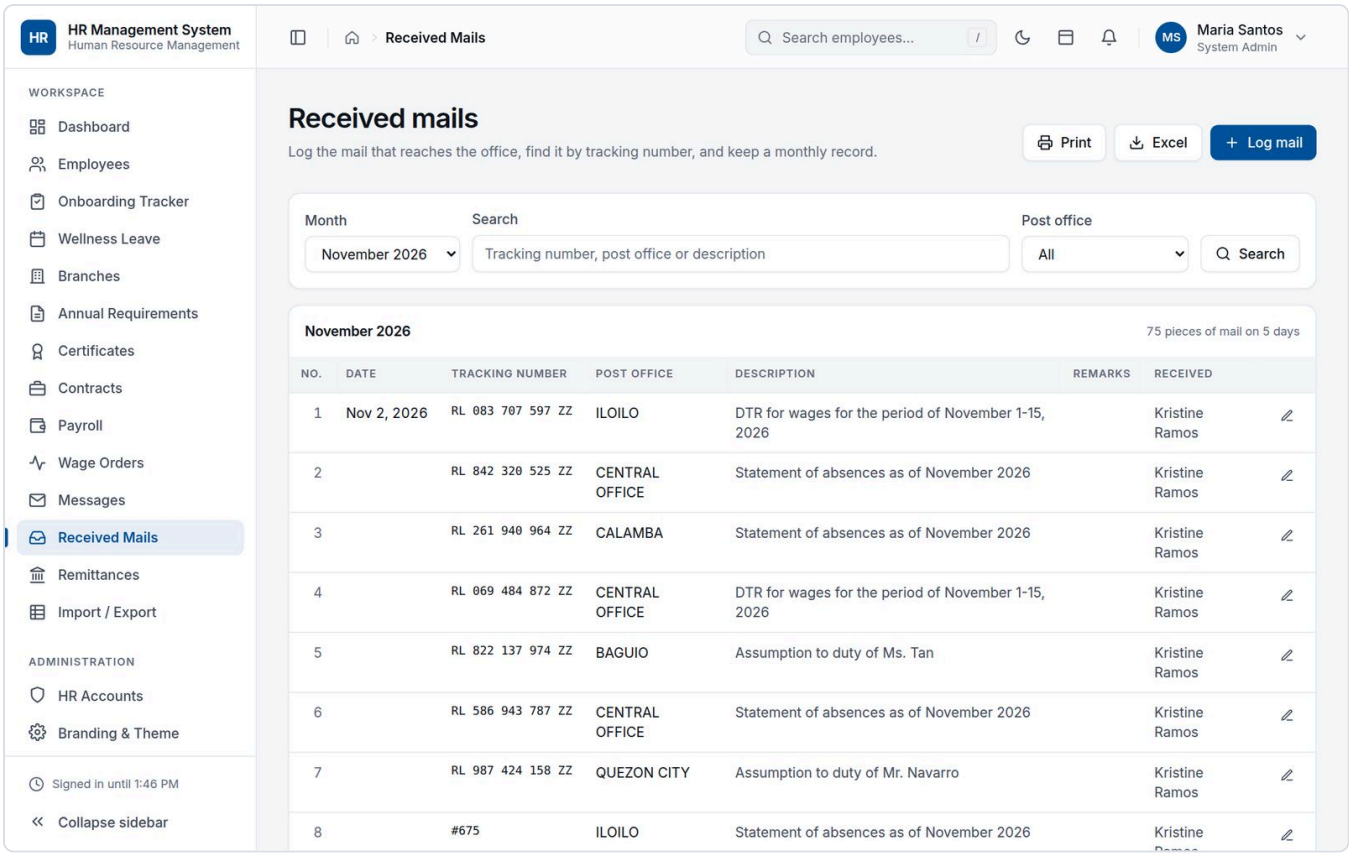

Writing a message to a group of employees

Open a sent message to see each recipient's status: sent, waiting or failed, with a note. **Retry** resends the failed ones. Emails go out a few at a time within the hourly limit set in Email Settings, so a large message can take a while to finish.

> **No email address?**
> Employees without an email address on their record are skipped, and listed so you can follow up.

15 Received Mails

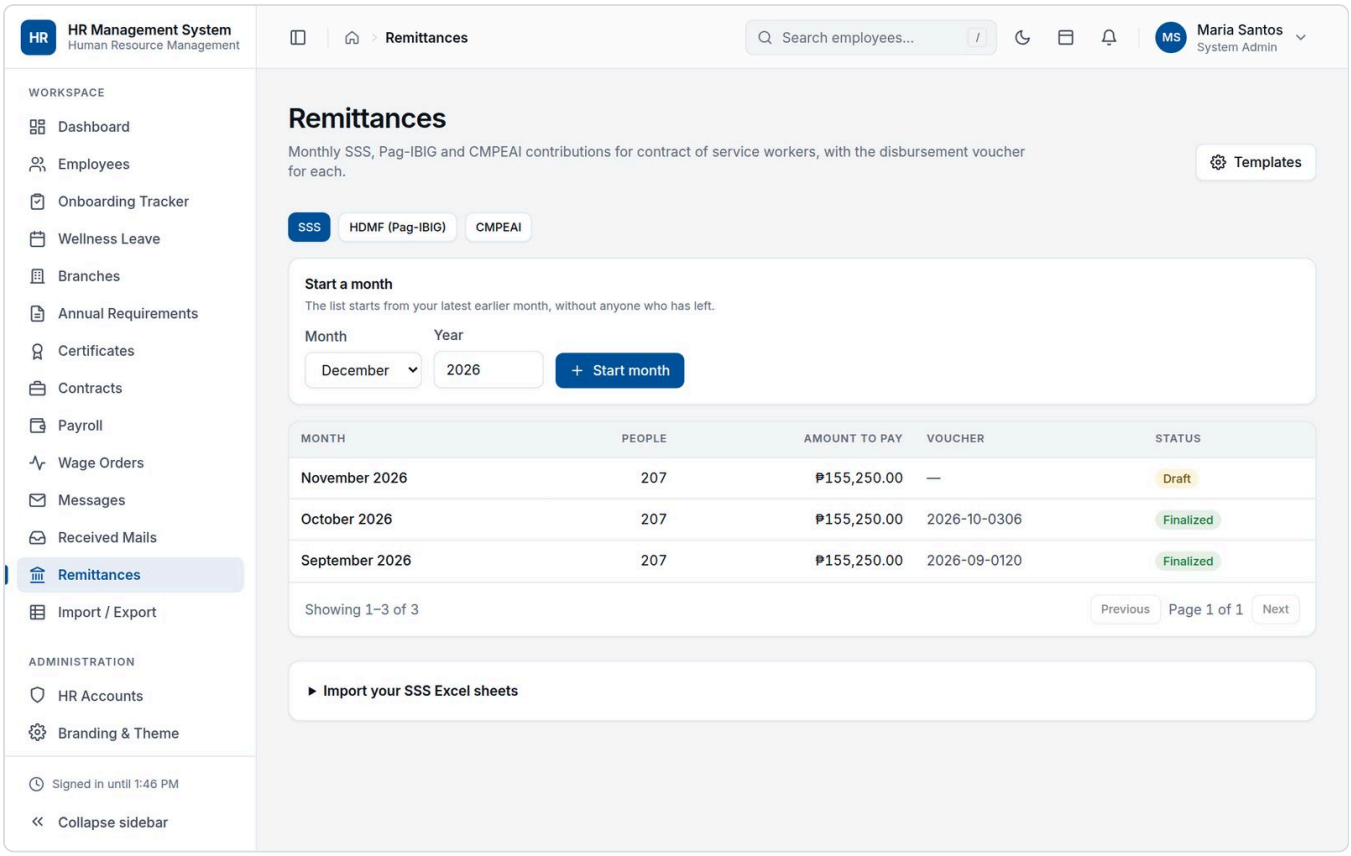

The received mail log

A log of the mail that reaches the office: date, tracking number, sending post office, description, remarks and who received it.

- **Log mail** adds a new item. Search by tracking number to find one quickly, or filter by month.
- **Print** produces a monthly record, and **Excel** downloads it.
- **Import from your Excel log** loads an existing spreadsheet. It's checked before saving.

16 Remittances

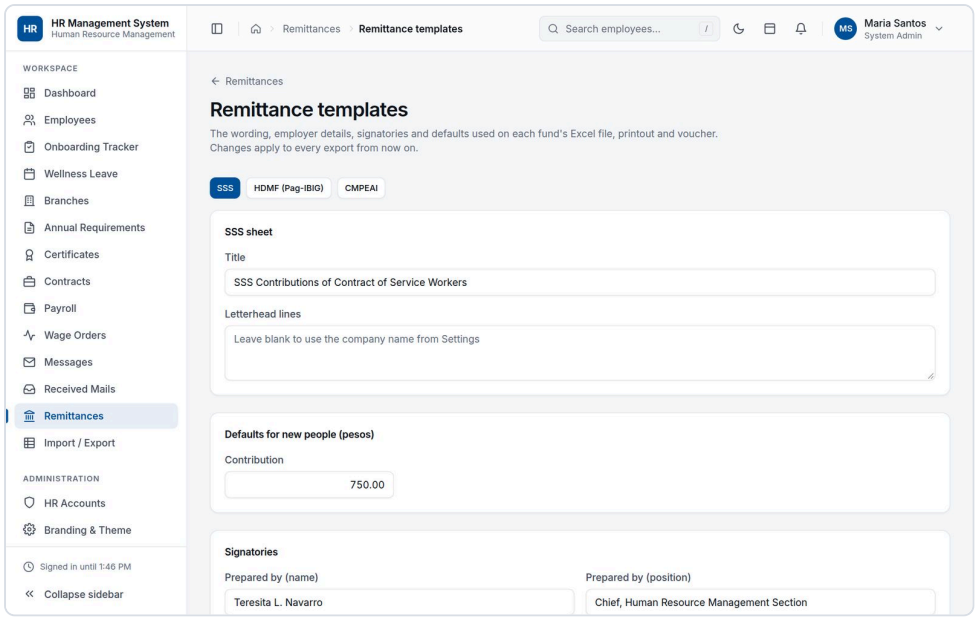

Monthly remittances for one fund

The monthly **SSS**, **Pag-IBIG** and **CMPEAI** contributions for contract of service workers, with the disbursement voucher for each. Choose the fund at the top of the page.

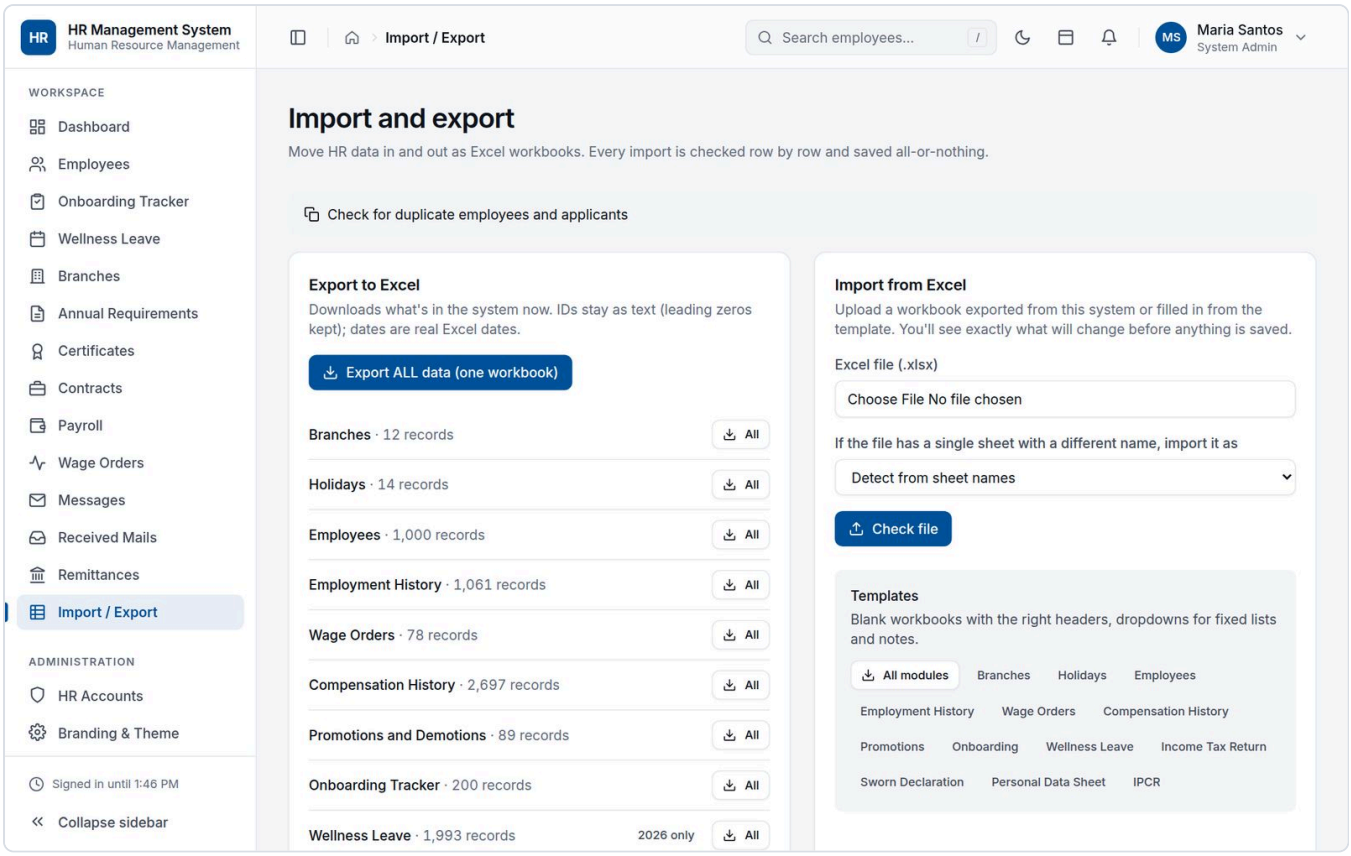

1. **Start a month**: the list starts from your latest earlier month, without anyone who has left. Earlier months can also be imported from your existing Excel sheets.
2. **Review the lines**: add or remove people and correct amounts. When active COS workers aren't on the list, a button offers to **add** them.
3. **Finalize** locks the month. **Reopen** unlocks it if a change is needed.
4. **Print list**, download it in the fund's **Excel** format, and fill in the voucher details to **Print voucher** or download the **Voucher (PDF)**.

Settings holds each fund's wording, employer details, signatories, default amounts, and the voucher officials shared by all funds.

Remittance and voucher settings

17 Import / Export

Import / Export: exports on the left, imports and blank templates on the right

Moves HR data in and out as Excel workbooks: branches, holidays, employees, employment history, wage orders, compensation history, promotions, onboarding, wellness leave and the annual requirements.

Importing

1. Under **Templates**, download a blank workbook for the kind of record (or **All modules**). It has the right headers, dropdown lists for fixed values, and notes. A file exported from the system can also be edited and imported back.
2. Fill it in. Keep IDs as text so leading zeros stay, and use real Excel dates.
3. Under **Import from Excel**, choose the file and press **Check file**. The system checks every row and shows what will be created, updated or left unchanged, with any errors by row number.
4. If it looks right, **commit** it. An import is saved all-or-nothing: if any row has an error, nothing is saved until it's fixed.

> **Order matters for a first load**
> Import branches first, then employees, then their history, leave and requirements, because each later file refers to records from the earlier ones.

Exporting

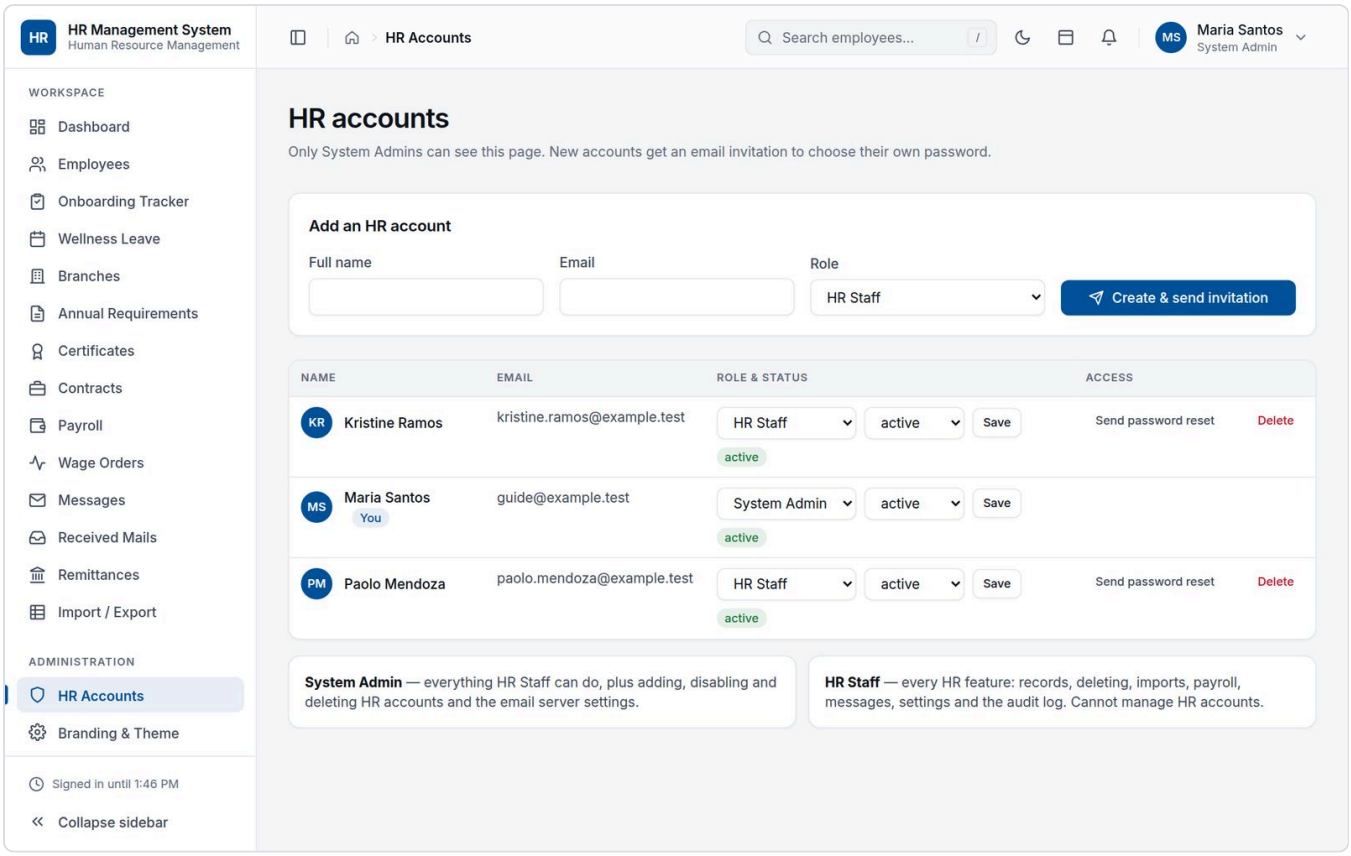

The **All** button on each line under **Export to Excel** downloads what's in the system now. **Export ALL data** downloads everything as one workbook, which is a useful extra backup.

Duplicates

Check for duplicate employees and applicants finds records that look like the same person entered twice: same name and birth date, or the same email, TIN, SSS, PhilHealth or Pag-IBIG number. The oldest copy in each group is kept by default; tick the copies to delete.

18 Administration

HR Accounts ADMIN

HR Accounts: add accounts, change roles and access

- **Add an HR account**: enter the full name, email and role, then **Create & send invitation**. The person chooses their own password from the email.
- Change a person's **role**, or set their access to **active** or **disabled**, then press **Save**. A disabled account can't sign in, but its history stays.
- **Send password reset** emails a new link. Locked accounts show an **Unlock** button.
- **Delete** removes an account. You can't delete your own account.

Branding & Theme

The company name, logo (PNG, JPG or WEBP up to 2 MB), the letterhead printed on documents such as the employee profile, the colors, and the default light or dark mode. Each person can still switch light or dark mode for themselves.

Email Settings

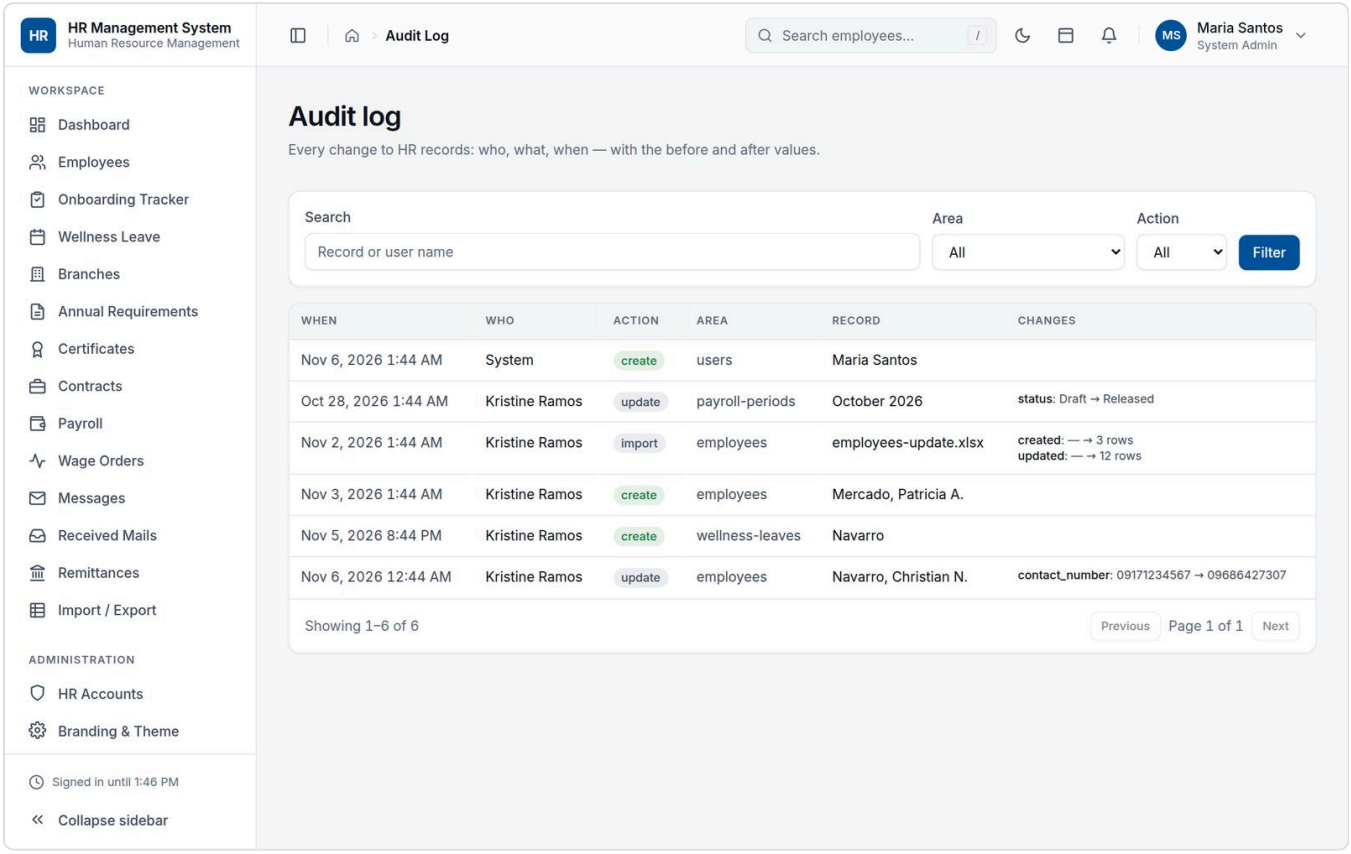

- Turn the **automatic emails** on or off: leave filed, leave status changed, requirements for newly hired applicants, and payslips when payroll is released.
- **Maximum emails per hour**: keep this within the mail provider's limit. Extra emails wait in the queue and go out later.
- **Email templates**: the subject and wording of each automatic email and of the templates for manual messages. Placeholders in double braces, such as the employee's name, are filled in for each person.
- The mail status shows whether the last send worked and how many emails are waiting.

Email Server (SMTP) ADMIN

The mail server used for sign-in codes, invitations, password resets, payslips and all notices. After any change, use **Save and test connection** and **Send a test email**. The password is stored encrypted and never shown again.

> **Be careful here**
> If these settings are wrong, sign-in codes stop arriving and nobody can sign in. Test before signing out.

Audit Log

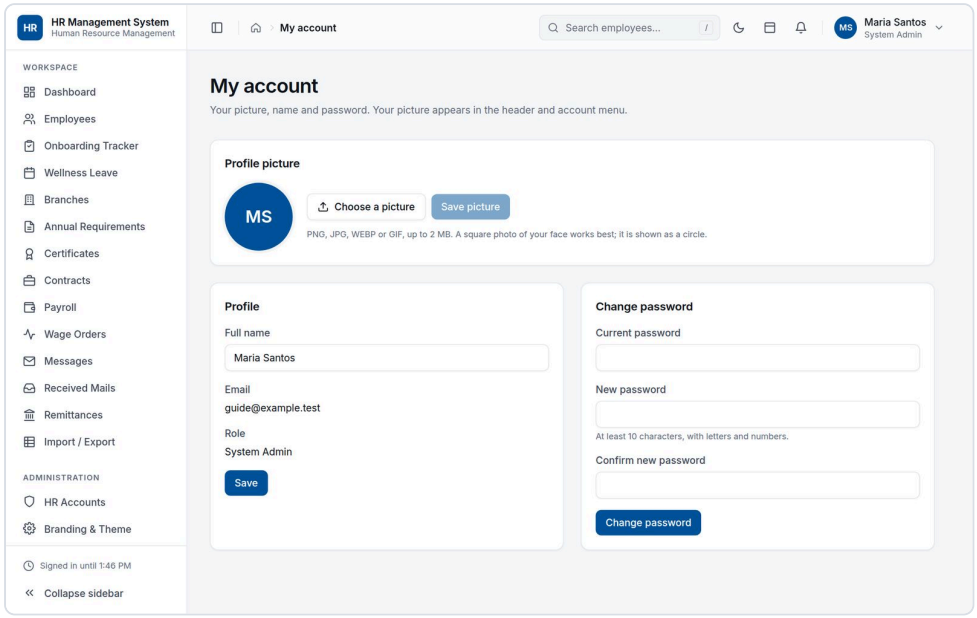

The Audit Log: who changed what, and the before and after values

Every change to HR records is logged with the time, the person, the action, the area, the record and the exact changes. Search it, or filter it by area, to answer questions like "who changed this employee's contact number?".

19 My profile and notifications

My profile

Open it from the account menu. You can change your **picture** (PNG, JPG, WEBP or GIF up to 2 MB; a square photo works best), your **name**, and your **password**. A new password needs at least 10 characters with letters and numbers, and you must enter your current one.

My profile

Notifications

The bell in the top bar shows system events, such as new leave filings. Click one to open the related record, or use **Mark all as read**.

20 First steps on a new system

The live system starts empty, apart from the HR accounts, templates, scopes of service and holidays. Work through this list once, in this order:

#	Where	What to do
1	Branding & Theme	Upload the PhilPost logo and set the letterhead lines.
2	Email Settings	Check which automatic emails should be on, and the hourly limit.
3	HR Accounts ADMIN	Invite the HR team and remove accounts that aren't needed.
4	Branches	Add every post office and office, with its region (or import them).
5	Wage Orders	Add the regional minimum wages in force.
6	Import / Export	Import employees, then their employment and compensation history.
7	Contracts › Settings	Enter the four signing officials, the wage order wording and the default place of service.
8	Remittances › Settings	Enter the employer details, signatories and voucher officials for each fund.
9	Payroll › Settings	Set the payslip header and the earning and deduction items.
10	Wellness Leave › Allowance & holidays	Check this year's allowance and holidays.
11	Annual Requirements › Deadlines	Set this year's deadlines, then generate the rows for all active employees.

21 Common questions

I didn't receive my sign-in code.

Wait a minute and check the spam folder, then press **Resend code**. If codes still don't arrive, the mail server may be down: ask a System Admin to check **Email Server (SMTP)**, or to have a code printed on the server.

My account is locked.

After five wrong passwords the account locks for 15 minutes. Wait, or ask a System Admin to unlock it. Use **Forgot password** if you're not sure of your password.

An issued certificate or contract has a mistake.

Fix the cause (the employee record, the template or the settings), then **void** the wrong document and issue a new one. Issued documents never change by themselves.

The system won't let me delete something.

Other records still depend on it. For example, an employee with payslips, or a branch with employees in it. The message says what is in the way. For people who have left, record a separation instead of deleting them.

An import was refused.

The check lists each problem by row number and column. Fix them in the Excel file and upload it again. Nothing was saved from the refused file.

Emails are slow to go out.

Emails are sent a few at a time, within the hourly limit set in Email Settings. Large messages and payroll releases finish over several minutes. Failed emails can be retried from Messages.

The leave form says the leave is over the allowance.

The employee doesn't have enough days left this year, or the dates overlap another filing. The preview on the form shows the remaining balance.

Something looks wrong and I don't know why.

Look at the **Audit Log** to see who last changed the record and what they changed.
